INTRODUCTION.

THE reader may, perhaps, at first be surprised that an attempt should be made to improve upon Mr. Hoyle's Games, after the unrivalled reputation he has gained and supported for so many years. But as during his life he constantly made alterations and additions to every new edition of his work, a field was left open (as his demise) for the improvement of his treatifes upon his own plan. At the same time, without difparaging the merit of his work, it must be obvious to every reader that his manner was greatly confused, and his meaning frequently unafcertained. Therefore. to methodize a fimilar performance, and convey the writer's meaning in fuch language

guage as is at least perspicuous, if not elegant, became another object of the

present Editor's attention.

It often happens in many scientific performances, that the writer takes for granted that the reader must be acquainted with fuch general rudiments as he himfelf is particularly familiar with; and, therefore, pens probably an elaborate, or critical performance for adepts, instead of an instructive one for novices. This obfervation was never more forcibly verified than in Mr. Hoyle's treatife, where without explaining the nature and general fystem of each game, he enters upon the intricacies and difficulties that may occur in it, when the learner does not perceive from what causes, or upon what foundation these embarrassments can arise. So that, in fact, that gentleman instead of teaching his games to those that are ignorant of them, feems only to aim at the improvement of those that have already learned them.

In the following sheets, therefore, attention is paid to lead the scholar by degrees, from the C, of each game

(if

tttri

(if the expression may be allowed) to the ultimate point of perfection in playing it: for, to make a comparison, it would be absurd to put a lad into practice, tare and tret, &c. before he had learnt addition. All the minutiæ of each game are for this reason explained, before the niceties, refinements, and finesses are entered upon; as, without being acquainted with the former, the utility of the latter is entirely exploded.

For the adepts here are introduced many new cases and examples never before printed; and in the Game of Whist the reader is presented with an original Tech-

nical Memory.

Besides the different games that Mr. Hoyle has treated upon, which are all here inserted, two other games are introduced that he never touched upon, though greatly in vogue, and much admired by the nobility and people of rank. These are Billiards and Tennis. In the treatise on the first is given an account of the origin of the game, and a description of the manner of playing it; the general rules observed, and such as are A 2 usually

usually dispensed with. The different kinds of games played at Billiards, with all the various odds, &c. In the treatise on Tennis, the nature of the game, and the manner of playing it are exhibited; with a particular description of a Court; the method of marking, with the odds at the different periods of a fet; an attempt as original as it is ufeful as well to all Tennis-players as Betters.

Upon the whole, the Editor flatters himself, that this work will merit the approbation of the Public, as great care has been taken to render it correct, particularly with regard to the Calculations, so essential at' all Games, upon which any confiderable fums are wagered; and he flatters himself he may, without vanity, stile this little performance HOYLE'S GAMES IMPROVED.

ONTHE

GAME OF WHIST.

CHAP. I.

The Nature of the Game of Whist fully explained, with general Rules for playing the same.

THE Game of Whist requires great attention and silence, as it chiefly depends on the memory, and derives its name from the taciturnity that should be observed in playing it.

This game is played by four persons, who cut for partners; the two highest and the two lowest are together, and the partners sit opposite to each other: the person who cuts the lowest card is to deal first, giving one at a time to each person, till he comes to the last card, which is turned up for the trump, and remains on the table till each person has played a B card:

eard; then, as the dealer's property, is taken up by him. The person on the left hand side of the dealer plays first, and whoever wins the trick is to play again, thus going on till all the cards are played out. The ace, king, queen, and knave of trumps are called honours; in case any three of these honours have been played between, or by either of the two partners, they reckon for two points towards the game; and if the four honours have been played between, or by either of the two partners, they reckon for four points towards the game, the game consisting of ten points. The honours are reckoned after the tricks; all above six tricks reckoning also towards the game.

General Rules for playing the Game of WHIST.

I.

A FTER forting the hand of cards, and obferving which is the strongest suit, he who
is to play first should lead from that suit; for
example, suppose he has a sequence of king,
queen, and knave, or queen, knave and ten,
he may safely lead the highest of the sequence;
but if he has five or six in number he must begin with the lowest. In respect to trumps he
must always begin with the highest, by which
means he forces out he reformer trumps, and
can come in again.

fu

or

re

11.

He should never be afraid to play trumps when he has five in his hand, even of the smallest, although he may not have any good cards of any other suit. If his right hand adversary wins the trick, his partner will be the last player, and by laying ten-ace * over the third player, he has a chance of two tricks without weakening his hand.

e

r

r

r

9

e

0

r

5,

-

h

d

I.

III.

With ace and king of any two fuits, and only two or three small trumps, the aces and kings should be played out, in order to make as many tricks as possible; and having but two or three small trumps, he should never force his partner to trump, if he finds he cannot follow suit; but he should endeavour to throw the lead into his partner's hand; for otherwise he would weaken his partner's hand, and hinder him from bringing his strong suit in.

IV.

He should in general return his partner's lead, unless he has some capital cards of his own, such as ace, king, queen; king, queen, knave; or queen, knave, ten; in this case, he need not regard his partner's lead.

V.

As this game is played with the lurch, that is, to fave half the stake, five points must be

^{*} Ten-ace is when an intervening card is wanting to make the fequence; for example, ace, queen, king, mave, &c.

made before the game is out: he should not venture to play trumps when he is four of the game, unless he is very strong, having at least an honour and three trumps, or ace, king, and two small ones.

VI.

When the game is scored nine, at which stage the honours reckon for nothing, he should be still more cautious how he plays trumps, even if he is strong in hand; and give his partner an opportunity of trumping the adversaries suits, in case he is deficient in them. At any other stage of the game, when more than one point is played for, the game should be played otherwise.

VII.

If his adversaries are fix or seven love of the game, he should play a forward or bold game, that he may have a chance, at the risque of a trick or two, to come up with them. If he has but three trumps and other good cards, he may play trumps, especially if he has a sequence, or queen, knave, and a small one; it can do no hurt, but may chance to strengthen his partner's hand and thereby bring up his game.

VIII.

He should always risque a trick or two when the game is much in his favour; because a new deal is of greater consequence to the adversary than one or two points are to him. n

W

th

at

br

do

pa

pa

kir be;

han

· IX.

When the player finds there is a likelihood of either faving the game or his lurch, he should risque the odd trick; but if the game is five all, and he can make two tricks in his own hand, he should make them, in order to secure the difference of two points, which make the game near two to one in his favour.

X.

A good player should begin with a small trump, when he has ace, king, and four small ones; for this reason: if his partner has a better trump than the last player, which is an equal wager but he has, he has a chance of fetching out all the trumps, by having three rounds of them.

XI.

He should play the king first, if he has king, queen, ten, and three small trumps, in order to bring out the knave the second round; if it does not fall, he may finesse * his ten when his partner returns trumps.

XII.

The odds are always in his favour that his partner holds an honour, confequently if he has king, queen, and four small ones, he should begin a small one.

* Finesse is to play a small card which may win, keeping the superior card or cards to lay over the right and adversary.

hen

new

XIII.

When he is last player, and observes a weak card to come from the third player, without any particular good cards of his own, he should return the adversary's lead upon him, and give his partner the opportunity of laying ten-ace over him in that suit: and if the adversary should change his suit, he will lay ten-ace over him in that also.

XIV.

When queen, knave, and four finall trumps are dealt him, he should play a small one first, the odds being in his favour that his partner holds an honour; if he has knave, ten, and four small trumps, he should also begin with a small one, for the same reason.

XV.

If he has knave, ten, eight, and three small trumps, the knave should be played first, by which means the nine may be prevented from winning a trick, the odds being in his favour that three honours are played in two rounds.

XVI.

If an honour is turned up against him on his left hand, and he has ten, nine, and eight, with two or three small trumps; when he is to play, he should play through the honours with the ten, which will force the dealer to play his honour to a disadvantage, if the dealer does not chuse to leave it to the option of his adversary

whe-

ti

p

p

in g

b

b

ti

h

1

whether he will pass it or not; but if he has six trumps of a lower denomination, and not ten, nine, and eight, and no honour turned up against him, he should begin with a small one.

XVII.

In general, when he has two capital cards in trumps, and two or three small ones, he should begin with a small one, for the reason assigned in No XIV.

XVIII.

When he has ace, king, knave, and two finall trumps, or even one small trump, by first playing the king, and putting the lead in his partner's hand, who will play a trump; judging him to have ace and knave, from his beginning with the king: in this case the knave should be finessed, nothing being against him but the queen.

XIX.

If he has knave, ten, eight, and two small trumps, by playing the knave first, it is odds but in two rounds of trumps the nine falls, or he may finesse the eight when his partner returns trumps.

XX.

With five trumps of a lower denomination, he should begin with the smallest, unless he has a sequence, of ten, nine, and eight; then he should begin with the ten.

XXI.

When he has king, queen, ten, and one small trump, he must begin with the king, and wait for his partner's return of the trumps, in order to finesse the ten, by which means he may win the knave.

XXII.

In order to prevent the ten from winning, when he has queen, knave, nine, and one small trump, he must begin with the queen. And in case he has knave, ten, eight, and one small trump, he should begin with the knave, that the nine may not win.

XXIII.

If he has ten, nine, eight, and one small trump, he should begin with the ten, thereby he strenthens his partner's hand, leaving it at his option to take it or not.

XXIV.

He should begin with a small one, when he has the ten and three small trumps.

XXV.

If he has a good fuit, and ace, king, and four small trumps, he must play three rounds of trumps, in order to secure his strong suit from being trumped.

fi

b

d

te

fi

n

XXVI.

When he has king, queen, ten, and three fmall trumps, he should begin with the king, because he has a chance of the knave's coming down in the second round: and to secure his strong suit, he should not wait to finesse the ten. If he should have queen, knave, and three small trumps, and some good suit to make, he must begin with a small one.

XXVII.

If he has knave, ten, eight, and two small trumps, with a strong suit, he should begin with the knave, in order to make the nine fall in the second round; but if he has knave, ten, and three small trumps, with a good suit, he should play a small one first.

XXVIII.

With ten, nine, eight, and one small trump, provided he has a good suit, he should begin with the ten, by which means he may get the trumps out, and have a chance of making his strong suit.

t c

TF the player is elder hand, and that his game confifts of king, queen, and knave, of one fuit; ace, king, queen, and two fmall cards of another fuit; king and queen of the third fuit, and three small trumps, he must begin with the ace of his best suit (or a trump) which informs his partner that he has the command of that fuit: he must not go on with the king of the fame fuit, but he must play a trump next, and if he finds his partner is not strong enough to support him in trumps, and his adverfary plays to his weak fuit, viz. the king and queen only, he must in that case play the king which belongs to the best suit; and if there is a probability of its being trumped, he must proceed then to play the king of the fuit of which he has king, queen, and knave. If his adversaries do not play to his weakest suit, in that case he must go on with his trumps as often as he gets the lead, although his partner does not feem to give him any affistance in them. By doing this, if his partner has but two trumps, and his adversaries have each four, in three rounds

round of trumps there will remain only two trumps against him.

II.

Supposing him still elder hand——If he has ace, king, queen, and one small trump, with a sequence from the king of five in another fuit, with four other cards of no value, he must begin with the queen of trumps, and then play the ace, which thews his partner that he has the king: then by stopping till he has gained the command of his great fuit, he also informs his partner that he has the king and one trump only eft; for if he had the king and two trumps nore remaining, he might, without danger. lay out his king. He should begin with the owest of a sequence, because his partner havng the ace, will play it, and make room for is fuit. For, as he has let his partner into the ate of his game, as foon as his partner has the ead, if he has a trump or two left, he will play umps, by which means it is almost a certainty clearing the adversaries hands of all their umps, with the king.

III.

If he is fecond player, and has the ace, king, ad two small trumps, with a quint-major of other suit, three small cards in the third suit, done in the fourth suit; suppose the adverty begins with the ace of his weak suit, and en plays the king, he should not trump it, throw away a losing card; and if the queen afterwards played, he should throw away another

other losing card, and so on the fourth time, in hopes his partner may trump it, who would in that case play a trump, or play to his strong fuit. If trumps should be played, he should go on with them two rounds, and then proceed to play his strong suit; in so doing, if there should be four trumps in one of his adversaries hands, and two in the other, which would be nearly the case, as his partner is entitled to three trumps out of the nine, there can remain only fix trumps between the adverfaries; then his strong fuit forcing their best trumps, he has a probability of making the odd trick in his own hand; whereas if he had trumped one of his adverfaries best cards, he would have so weak ened his hand, as probably not to make more than five tricks, without his partner's affiftance

IV.

1

1

I

If he has ace, queen, and three small trumps ace, queen, ten, and nine of another suit; wit two small cards of each of the other suits: hi partner leads to his ace, queen, ten and nine and as this game requires rather to deceive the adversary, than to inform his partner, he shoul put up the nine, which naturally leads the adversary to play trumps, if he wins that card Then as soon as trumps is led, he must return them upon his adversary, keeping the comman in his own hand. If the adversary who le trumps to him puts up a trump which his partner cannot win, in all probability his partner lead will be returned to him by the adversar

imagining that that fuit lies between the two adverse partners.—If this finesse succeeds, he will be a great gainer by it, without running any risque.

V.

If he should have ace, king, and three small trumps, with a quart from a king, and two fmall cards of another fuit, and one small card to each of the other fuits; his adverfary leads a fuit of which his partner has a quart-major; his partner puts up the knave, and then proceeds to play the ace : if he refuses to that fuit, by playing his loofe card; when his partner plays the king, the right-hand adversary trumps it, suppose with the knave or ten, he should not over trump him, which if he did would probably lofe him two or three tricks by weakening his hand: but if that fuit is led of which he has none, he should trump it, and then play the lowest of his sequence, in order to get the ace either out of his partner's or adverfary's hand, which being done, as foon as he gets the lead, he should play two rounds of trumps, and then proceed to play his strong fuit.

Some observations whereby it may be known that his partner has no more of a suit which either of them have played.

20

pe

ta

01

h

re

fi

FOR example, suppose he leads from queen, ten, nine, and two small cards of any suit, the second hand puts on the knave, his partner plays the eight; in this case, he having queen, ten, and nine, it is a demonstration, if his partner plays well, that he can have no more of that suit.

By that discovery, he may play his game accordingly, either by forcing his partner to trump that suit, if he is strong in trumps, or by playing another suit.

If he has king, queen, and ten of a fuit, and he leads his king, his partner plays the knave, this also demonstrates he has no more of that fuit.

If he has king, queen, and many more of a fuit, and begins with the king, in some cases it is good play in a partner, when he has the ace and one small card in that suit only, to win the king with the ace; for suppose the partner to be very strong in trumps, by taking the king with the ace, he gets the lead and trumps out, and having cleared the board of trumps, his partner returns his lead; and the ace being out, there is room for him to make that whole suit, which could

could not have been done if the partner had

kept the ace.

Suppose he has no other good card in his hand besides that suit, he loses nothing by the ace's taking his king; and if it should so happen that he has a good card to bring in that suit, he gains all the tricks which he makes in that suit by this method of play: as his partner has taken his king with the ace, and trumps out upon it, he has reason to imagine that his partner has one of that suit to return him; for which reason he should not throw away any of that suit, even to keep a king or queen guarded.

CHAP. IV.

Methods by which he may endeavour to deceive and distress his adversaries, and demonstrate his game to his partner.

FOR example, suppose he plays the ace of a fuit of which he has ace, king, and three small ones: the last player does not chuse to trump it, having none of the suit. If he is not strong enough in trumps he must not play out the king, but keep the command of that suit in his hand by playing a small one, which he must do in order to weaken his adversary's game.

If a fuit is led of which he has none, and there is a moral certainty that his partner has not the best of that suit, in order to deceive the adversary he should throw away his strong suit; but to clear up doubts to his partner when he leads, he should throw away his weak suit. This method of play will generally succeed, unless he is playing with very good players, and even with them he will oftener gain than lose by it.

P.

EXAMPLE I.

CUPPOSE a heart is played by the adverfary. and clubs to be trumps; his partner, having none of that fuit, throws away a spade; he is then to judge his partner's hand is composed of trumps and diamonds; and if he wins that trick. and being too weak in trumps, he dare not force him; and at the fame time he has king, knave, and one fmall diamond; and further, suppose his partner to have queen and five diamonds; in that cafe, by playing his king in the first lead, and his knave in the second. his partner and him may win five tricks in that fuit, whereas if he had led a small diamond. and his partner's queen having been won with the ace, the king and knave remaining in his hand would obstruct his partner's suit. Though his partner may have the long trump*, yet by his partner's playing a small diamond when his long trump has been forced out of his hand, he will lose by this method of play three tricks in that deal.

^{*} The last remaining trump.

II.

Similar to the former case, if he should have queen, ten, and one finall card, in his partner's strong suit, which may be discovered by the former example; supposing his partner to have knave and five small cards in his strong. fuit; he, having the lead, should play his queen, and when he is to play again should play the ten; then suppose his partner to have the long trump, by this method four tricks are made in that fuit; but were he to play a fmall one in that fuit, his partner's knave being gone, and the queen remaining in his own hand in the fecond round of playing that fuit, his partner's long trump being forced, the queen would obftruct the fuit, and in that deal he must lose three tricks by this method of play.

III.

Now, instead of his leading, suppose his partner is to lead, and in the course of play it appears to him that his partner has one great suit;
such as ace, king, and sour small ones, and
he has queen, ten, nine, and a very small one
of that suit; in that case, when his partner plays
the ace, he is to play the nine; when the king
is played, he must play the ten; consequently
in the third round he will make his queen, and
having a small one remaining, he will not obstruct his partner's great suit; whereas if he
had kept the queen and ten, and the knave
should have sallen from the adversaries, he
would have lost two tricks in that deal.

As

As in the former case, if he should find his partner to have one great suit, and that he has the king, ten, and a small one of that suit; his partner leads the ace, he should in that case play the ten, and in the second round his king. This method wil prevent a possibility of obstructing his partner's great suit.

1.

His partner having ace, king, and four small cards in his great suit, and he having queen, en, and a small card in the same; when the ace is played by his partner he should play his en, and when the king is played by his partner he should play his queen; by which method of play he only risques one trick to get four.

VI.

Suppose he has five cards of his partner's frong suit, viz. queen, ten, nine, eight, and a mall one; and that his partner has ace, king, nd four small ones; when his partner plays the ce he must play his eight; when his partner lays the king he must play the nine; and in he third round, the adversaries having no more f that suit, he must proceed then to play the ueen, and then the ten; and having a small ne remaining, and his partner two, he therey gains a trick, which he could not have done ut by playing the high cards, and by keeping a mall one to play to his partner.

CHAP. VI.

Method of playing when an honour is turned up on the right hand, with directions how to play when it is turned up on the left hand.

EXAMPLE I.

SUPPOSE the knave is turned up on his right hand, and that he has king, queen, and ten; in order to win the knave he must begin with the king; by which means, his partner may suppose him to have queen and ten remaining, especially if he has a second lead, and he does not proceed to play the queen.

II.

Suppose the knave turned up as before, and he has ace, queen, and ten, by playing his queen, it answers the purpose of the former rule.

III.

When the queen is turned up on his right hand, and he has ace, king, and knave, by playing his king, it answers the same purpose of the former rule.

CHAP.

CHAP. VII.

The danger of forcing a partner.

SUPPOSE one of the players to have a quintmajor in trumps, with a quint-major and three small cards of another suit, and he has the lead; the adversaries to have only five trumps in either hand: he who has the quint-major in trumps, &c. having the lead, must win every trick. On the contrary, if he had not the lead, and forced to trump first, he would win only five tricks.

The advantage of a faw.

A. and B. are partners, and A. has a quartmajor in clubs, they being trumps, another
quart-major in hearts, another quart-major
in diamonds, and the ace of spades. The
adversaries C. and D. have the following
cards, viz. C. has four trumps, eight hearts,
and one spade, D. has five trumps, and eight
diamonds; C. being to lead, plays an heart,
D. trumps it, D. plays a diamond, C trumps
it; and thus pursuing the saw, each partner
trumps a quart-major of A.'s, and C. being to
play the ninth trick, plays a spade, which D.
trumps; thus C. and D. have won the nine
first tricks, and leave A. with his quart-major
in trumps only. This shews the strength of a
faw, which should be embraced whenever the
occasion offers.

CHAP. VIII.

Shewing when it is proper, at second hand, to put up the king, queen, knave, or ten, with one small card of any fuit, &c.

CASE I.

CUPPOSE he has four small trumps, in the three other fuits he can make one trick feture in each of them; and admitting his parther has no trump, in that case the remaining him trumps must be divided between his adveraries; suppose five in one hand, and four in he other, as often as he has the lead he must play trumps; and if he should have four leads, t is then evident his adversaries can make her only five tricks out of nine trumps; but if he ad suffered them to make their trumps single, hey could possibly have made nine tricks. By which example, it is plain that taking out two rumps for one is a very great advantage.

However, there is an exception to the above ule; for instance, if he finds in the course of lay that his adversaries are very strong in any articular fuit, and his partner can give him o affistance in that fuit, he should examine the ores, and keep one trump in his hand for fuch it, which may be the means of winning, or at

aft faving the game.

36

fuit, he should not put up his queen, because it is an equal wager that his partner has a better card in that suit than the third hand, and if so, he has the command of that suit in his own hand, except he wants the lead, then he should put up the queen.

III.

He should never lead from the king, knave, and one small card in any suit, as it is two to one his partner has not the ace, and thirty-two to twenty-five, or about five to four he has ace or queen; therefore, as he has only about five to four in his favour, and as he must have four cards in some other suit, supposing the ten to be the highest, he should lead that suit, because it is an equal wager that his partner has a better card in that suit than the last player. And if the ace of the first mentioned suit lies behind him, which is an equal wager that it does, in case his partner has it not, he may probably make two tricks in it by playing in this manner.

IV.

In the course of play, if it should appear that his partner and himself have four or five trumps remaining when their adversaries have none, and that he has no winning card in his hand, but judges his partner has a thirteenth card, or some other winning card in his hand; he then should play a small trump, to put the lead into his partner's hand, in order to throw away any losing card in his hand, upon such thirteenth or other winning card.

CHAP. IX.

When to put up at second hand, king, queen, knave, or ten of any suit, &c.

EXAMPLE I,

If he has the king, and one small card of any suit, and his right hand adversary plays that suit, he should not put up the king, unless he wants the lead, because a good player seldom leads from a suit of which he has the ace, but keeps it in his hand to bring in his strong suit after the trumps are played out.

II.

Suppose he has the queen and one small card of any suit, and his right hand adversary leads that suit, he must not put up his queen, because, if the adversary has led from the ace and knave, he will upon the return of that suit sinesse the knave, which is generally good play, especially if his partner has played the king, consequently the queen will be made; but by putting on the queen, it shews the adversary that he is weak in that suit, and makes him sinesse upon his partner throughout that whole suit.

II.

The former examples shew when it is proper to put up the king or queen at second hand. Now he should also observe that in case he has

ave, one two

fe it

f fo.

own

ould

bout nave ten be-

And hind in ind ably

ner.

pear five nave his

nd; the row fuch

A P

the knave or ten of any fuit, with a small card of the same suit, it is generally bad play to put up either of them at second hand, because it is five to two that the third hand has either ace, king, or queen of the suit led; therefore, as the odds against him are five to two, and though he should succeed sometimes by this method of play, yet in the long run he must lose, because it shews his adversary that he is weak in that suit, and in consequence of which they will sinesse upon his partner throughout that whole suit.

IV.

If he should have ace, king, and three small cards of a suit, his right hand adversary leads that suit; upon which he plays the ace, and his partner plays the knave; if he is strong in trumps, he should return a small one in that suit, in order to let his partner trump it. The consequence of this kind of play is as sollows: he keeps the command of that suit in his own hand, and at the same time it intimates to his partner that he is strong in trumps, and he may play his game accordingly, either trying to establish a saw, or trumping out to him, if he has either strength in trumps, or the command of the other suits.

V.

Suppose A. and B. to be partners, and their game is scored six, the adversaries C. and D. is scored seven, and that nine cards are played out, of which A. and B. have won seven tricks,

and

b

fe

P

de he

and suppose no honours are reckoned in that deal, then A. and B. have won the odd trick. which puts their game upon an equality; and suppose A. to have the lead, and that A. has two of the smaller trumps remaining, with two winning cards of other fuits, and suppose C and D. have the two best trumps between them, with two other winning cards in their hands, quere, how is this game to be played? It is eleven to three that C. has not the two trumps; and likewise eleven to three that D has them not. The odds being fo much in favour of A's winning the whole stake, it is his interest to play a trump; for suppose the stake to be 701. A. wins the whole stake, if he succeeds by this method of play; but if he had played the close game, by forcing C. or D. to trump first, he having won the odd trick already, and being fure of winning two more in his own hand; by this method his game will be fcored nine to feven, which is about three to two, and, therefore, A's share of the 70l. will amount only to 421. and by this method A. only fecures 71. profit; but in the other case, upon supposition that A. and B. have eleven to three of the stake depending, as aforefaid, by playing his trump, he is intitled to 551. out of the 701 depending. This case duly attended to may be applied to the like purpose in other parts of the game.

CHAP.

CHAP. X.

How to play when an ace, king, or queen, are turned up on your right hand, &cc.

I.

THE ace being turned up on his right hand, and having the ten and nine of trumps only, with ace, king and queen of another fuit, and eight cards of no value, Quere, How must he play this game? He should begin with the ace of the fuit of which he has the ace, king, and queen, which is an information to his partner that he has the command of that fuit; then he should play his ten of trumps, being five to two that his partner has king, queen, or knave of trumps; and though it is about feven to two that his partner has not two honours, yet if his partner should chance to have them, and that they are the king and knave, as his partner will pass the ten of trumps, and as it is 13 to 12 against the last player's holding the queen of trumps, supposing his partner to have it not, . when his partner has the lead and plays to his strong suit, he then should play the nine of trumps, in order to give his partner the chance of winning the queen, in case he lies behind it. The above case demonstrates that it is not so great an advantage for the adversary to turn up an ace, provided the game is played properly.

II.

When the king or queen are turned up on his right hand, the fame method of play may be made use of, provided his partner is a good player, otherwise it may prove a disadvantage.

P

If the adverfary on his right hand should lead the king of trumps, having himfelf the ace and four small trumps, with a good fuit, he should pass the king; and admitting his adversary to have king, queen, and knave of trumps, with one more, and that he shall play the small one, as a middling player would do, imagining his partner has the ace, in this case our player should pass the small one, as it is an equal wager that his partner has a better trump than the last player: this will induce the adversary to play his third trump, if he has one, thinking there must be a good reason for this method of play, and if he has not a trump, he will play his best fuit.

IV.

If the king and five trumps should be in his hand, and the right hand adversary plays the queen, as it is an equal wager his partner has the ace, he should not put on the king. If his adverfary should have queen, knave, ten, and one fmall trump, it is also an equal bett that the ace is fingle either in his partner's or adverfary's hand; for which reason he should not put on his king. If the queen is led, when he has the

D 3

king,

king, with two or three trumps, it is proper to put on the king, because leading from the queen and one small trump only is good play; in which case should his partner have the knave of trumps, and the lest hand adversary the ace, he would lose a trick by not putting on the king.

V.

A critical CASE to win an odd trick.

If A. and B. are partners against C. and D. and the game is nine all, supposing all the trumps are played out, and A. the last player, having the ace and four other small cards of a fuit in his hand, and one thirteenth card remaining; B. having only two small cards of that fuit; C. having queen and two other small cards of that fuit; D having king, knave, and one small card of the same suit; A. and B. having won three tricks, C. and D. four tricks, confequently A. must win four tricks out of the fix cards in his hand, to win the game. C. leads this fuit, and D. plays the king; A. lets the trick go, D. returns that fuit, A passes it, and C. plays the queen; fo that C. and D. have won fix tricks: and C. judging the ace of that fuit to be in his partner's hand, returns it; by these means the game is won, by A's winning the four last tricks.

1;

1-

The difference to be observed between a voluntary and forced lead; why it is bad play to change fuits often; and when to pass a trick.

T.

A Wide difference should be made between a voluntary lead and a forced lead of a partner. In the first case, a partner leads from his best suit, in which, finding his partner deficient, and not being strong in trumps, at the same time it not being the game to force him, he goes on with his next best suit; which method of play denotes the partner to be weak in trumps. It a partner continues his first lead, it is almost a certainty that he is strong in trumps, from which knowledge a good player should derive his advantage.

II.

It is reckoned bad play to change suits often, for in every new suit he runs the risque of giving his adversary the ten-ace; therefore if he has the queen, ten, and three small ones, and his partner puts up the nine only, then, if he should be weak in trumps, and having no tolerable suit to lead from, it is his best play to pursue that lead, and play the queen, which makes it optional in his partner to trump it or not, if he has no more of that suit. In his second lead, if he has queen and knave of any other suit, with one card only of the same suit, he should

A TREATISE on the

44

lead from his queen or knave of either of these suits, being five to two that his partner has one honour at least in either of them.

III.

At any time when he has ace, king, and one small card of any suit, with four trumps, and the right hand adversary leads that suit, he should pass it, because it is an equal wager that his partner has a better card in that suit than the third hand; and if his partner has, he must gain a trick by it; if not, as he has sour trumps, he cannot lose by it.

CHAP.

han and the ner

ge

o

trus five of tric

if h

CHAP. XII.

Why the command of the adversary's great suit should not be parted with; and several other useful cases.

IF he is weak in trumps, and he finds his partner not very strong in them, he should be very cautious how he divefts himfelf of the command of his adverfary's great fuit, for the following reason: suppose his adversary plays a fuit of which his antagonist has king, queen, and one fmall card only, the adversary leads the ace, and, upon playing the same suit, he plays his queen, making it clear to his partner that he has the king; fuppose his partner has none of that fuit, he must not play the king; because if the long trump be in the hand of the leader of that fuit, or in the hand of his partner, in order to get one trick he rifques the lofing of three.

If his partner remains with ten cards in his hand, and he judges them to confift of trumps and one fuit only, while himself his possessed of the king, ten, and one small card of his partner's strong fuit, with queen, and two small trumps, he then should judge his partner to have five cards of each fuit, and should play the king of his partner's strong suit. If he wins that trick, he should then play the queen of trumps; if he wins that also, he should then play trumps.

Except

than nuft nps,

hefe

one

and

nps, , he that

Except when the game is four or nine, this method of play may be made use of.

When the right hand adverfary leads a fuit of which he has the ten and two small ones, the third player puts up the knave, his partner wins it with the king; when his right hand adverfary plays a fmall one of that fuit again, he must not play his ten, because it may save his partner's ace, supposing his right hand adverfary led from the queen. This method of play generally fucceeds.

f

ec

0

in

an

fu

of

whi beg

um

IV.

Suppose our player to hold the best trump, and that the adversary A. has one trump only left, it appearing to him at the same time that the adverfary B. has a strong suit; though he permits A. to make his trump, by keeping the trump in his hand, he prevents the adversary B. any from making feveral tricks in his ftrong fuit; now, if he had taken out A's trump, it had fuit made but one trick difference.

The trump should always be remembered, both by himself and partner, and so placed as to have recourse to it when ever it is necessary: for admit it to be but a deuce, and that the dealer has two more, viz. the five and fix, if his part-ner trumps out with ace and king, he ought to dve play his five and fix, for this reason; suppose oh his partner to have ace, king, and four small rum trumps, by his partner's knowing him to have ler to the deuce remaining, he may reap a confiderable t ble advantage. VI. I

VI.

If three trumps should remain in his hand when no one else has any, with four cards of any certain suit, he should play a trump, to shew his partner that he has all the trumps, which also gives him a chance for the adversaries to throw away a card of the above-mentioned suit; and if that suit has been led once, one of which being thrown away, makes five, four in his hand make nine, so that only four remain in the other three hands, and his partner having an equal chan e of holding a better card in that suit than the last player, the chance is also equal of making three tricks in that suit.

VII.

If he has five trumps, and fix small cards of any suit, and is to lead, he should lead from the suit of which he has six; being deficient in two suits, the adversaries will probably play trumps, which will suit his purpose; whereas if he had begun to play trumps, they would have forced him, to his great disadvantage.

VIII.

A Case which often happens.

When two trumps are remaining at a time the ht to dversaries have only one, and his partner seems opose o have a strong snit, he should then play a small rump, although he may have the worst, in orhave ler to make way for his partner's suit, by taking dera he trumps out of the adversaries hands.

C HAP. XIII.

Explanation of the method how to play the fequences.

EXAMPLE I.

THE highest in sequences of trumps should be played, unless he has ace, king, and queen; and then he should play the lowest, which informs his partner of the state of his game.

II.

When he has king, queen, and knave, and two small ones, which are not trumps, he should begin with the knave, whether he is strong in trumps or not, as he makes way for the whole suit by getting the ace out.

III.

If he is strong in trumps, and has a sequence of queen, knave, ten, and two small cards of a suit, he should play the highest of his sequence; for if either of the adversaries should trump that suit in the second round, being also strong in trumps, he will make the remainder of that suit, by setching out their trumps. When he has knave, ten, and nine, and two small card of a suit, he may play in the like manner.

I

in the first

IV.

If king, queen, knave, and one small card of any suit, is the case, whether strong in trumps or not, he should play the king, and when there are only four in number, the same method of play should be observed by inserior sequences.

V.

When weak in trumps, he should begin by the lowest of the sequence, provided he has sive in number, because if his partner has the ace of that suit, he will make it. If he has the ace and four small cards of a suit, and weak in trumps, leading from that suit, he should play the ace. When strong in trumps, the game may played otherwise.

est, his

uld

CHAP. XIV.

What is meant by being strong or weak in trumps, and the method of playing accordingly.

I.

ACE, king, and three small trumps; king. queen, and three small trumps; queen, knave, and three small trumps; queen, ten, and three small trumps; queen and four small trumps; knave and four small trumps. When the player holds either of these hands of trumps, it may be said that he is strong in trumps.

And, on the contrary, when he holds but two or three small trumps, it may be said that

he is weaks in trumps.

II.

When he holds either of the following hands of trumps, he is intitled to force his partner at any stage of the game, viz. ace and three small trumps; king and three small trumps; queen and three small trumps; knave and three small trumps.

111.

He should keep forcing his partner, if once he has begun, though weak in trumps, when he finds he does not choose to trump out after having the lead, except he has good cards to play himself.

IV. II

is

2

g

tr

ki

ot

IV.

If he should by chance have but two or three small trumps, and his right hand adversary leads a fuit of which he has none, he should trump, to inform his partner that he is weak in trumps.

5.

It

V.

If he has ace, knave, and one small trump, and his partner trumps to him from the king and three small ones, his right hand adversary haying three trumps, and his lest hand adversary the same number, he should finesse the knave, and then play the ace, whereby, if the queen is on his right hand, he gains a trick; but if the queen is on the lest hand, and he plays the ace, and then returns the knave, the lest hand adversary putting on the queen, which is the game, it being above two to one that one of the the adversaries holds the ten, he gains no trick.

VI.

The former rule is answered exactly by putting on the knave, and returning the king, in case the partner leads from the ace, and he has king, knave, and one small trump. This method of play may be made use of in respect to other suits.

E 2 VII. When

VII.

When he is strong in trumps, and has king, queen, and two or three small cards in any other suit, he may lead a small one, it being five to four that his partner has an honour in that suit; if weak in trumps, he should begin with the king.

VIII.

If his right hand adversary leads a suit of which he has king, queen, and two or three small cards of the same suit, he being strong in trumps, may pass it, being an equal wager that his partner has a better card in that suit than the third hand; however he need not sear making that suit at any rate.

IX.

If the right hand adverfary leads a fuit of which he has king, queen, and one small card, whether in trumps or not, he should put on the queen: likewise, if he has queen, knave, and one small card, he should put on the knave; and if he has knave, ten, and one small card, he should put on the ten: by playing in this manner his partner expects him to have a better card or cards in the same suit; and consequently, according to the calculation, he can form his judgment.

If

If he is strong in trumps, and should have ace, king, and two small cards in a suit, and his right hand adversary should lead that suit, he may pass it, because it is an equal bett that his partner has a better card in that suit than the third hand: if it should so happen, he gains a trick by it; however, by his strength in trumps he cannot fail making his ace and king.

XI.

If he should have the ace, nine, eight, and one small trump, and that his partner leads the ten, he should pass it, because, if the three honours do not lie behind him, he is sure of making two tricks; he may do the same if he should have the king, nine, eight, and one small trump; or the queen, nine, eight, and one small trump.

XII.

If the right hand adversary leads from a suit of which he has ace, king, and queen, or ace, king, and knave, in order to deceive the adversaries, he should put on the ace. It encourages the adversaries to play that suit again; and tho he deceives his partner by this method of play, deceiving the adversaries is of much greater consequence.

XIII.

If he should have ace, ten, and one small card in one suit, and the ace, nine, and one E 3 fmall

fmall card of another suit, he should lead from the suit of which he has the ace, nine, and one small card; because it is an equal bett that his partner has a better card in that suit than the last player. Suppose he has not, and his right hand adversary leads from the king, or queen of the suit of which he has the ace, ten, and one small card, it being an equal bett that his partner has a better card in that suit than the third hand; and if it should happen so, upon the return of the suit, he will lie tenace, and probably get three tricks in that suit.

XIV.

To play at this game to perfection, he should not be content with only understanding the calculations which this treatife contains, and with being a judge of the general and particular cases here set forth; but should also be a very punctual observer of such cards as are thrown away, both by his partner and antagonists, and at what particular time.

Different Cafes to be observed.

I.

IF it should appear, that the adversaries have three or four trumps remaining, and that neither he nor his partner have any, he should not force one hand to trump, to give the other an opportunity of throwing a losing card away; but should find out a suit in his partner's hand, if he has no suit of his own, to prevent them from making their trumps separate.

II.

Suppose A. and B. partners against C. and D. and nine cards are played out; and likewife eight trumps played out; A. to have one rump only; his partner B.to have ace and queen of trumps; and the adversaries C. and D. to have the king and knave of trumps between them. A. leads his small trump, C. plays the knave of trumps; in this case, B. should play the ace of trumps upon the knave, for D. having four cards in his hand remaining, and C. only three, makes it about four to three in B's favour, that the king is D's hand. When the four cards hand are reduced to three, the odds then are three to two; and when reduced to two, the udds are two to one in favour of B's winning a rick, by putting on his ace of trumps. Thus the other fuits may be played according to Lis rule.

III. Suppose

fup

Suppose our player to have the thirteenth trump, with the thirteenth card of any suit in his hand, and one losing card, only three cards in all remaining; he should play the losing card, because if he played the thirteenth card first, the adversaries would not pass the losing card, knowing he has one trump remaining, consequently, he would play two to one against himself.

IV.

Suppose he has ace, king, and three small cards in any fuit, which has never been played, and that it appears to him that his partner has the only remaining trump; he should lead a fmall card in that fuit, because it is an equal bett that his partner has a better card in that fuit than the last player; if fo, and there being only three cards in that fuit in any one hand, he must win five tricks in that suit; but if he played the ace and king of that fuit, it is two to one that he wins only two tricks in that fuit. Provided the trumps are out, and he has good cards in other fuits to bring in this fuit, this method may be taken. By this way of play, the odds are reduced from two to one against him, to an equal chance, and he may probably gain three tricks by it.

V

When he wants to have trumps played by the adverfaries, having a fuit led to him by his partner,

partner, of which he has ace, knave, ten, nine, and eight, or king, knave, ten, nine, and eight, he must play the eight of either suit, which if his adversary wins, will probably, induce him to play trumps.

VI.

If he has a quart-major and one or two more of any fuit, and it is necessary to inform his partner that he has the command of fuch a fuit, to clear up doubts, he must throw away the ace of that fuit, upon any fuit of which he has none in hand, the odds being in his favour that neither of the adversaries have more than three in that fuit. He may play in the time manner, if he has a quart to a king, by throwing away the king, provided the ace is played out. If he has a quart to the queen, he may also throw away the queen, provided the ace and king are played out; and fo on in reject to inferior sequences if he has the best of them in his hand. This informs the partner of the flate of his game.

VII.

The necessity only of playing trumps, should induce him to play in the following manner. Suppose the king turned up on the left hand, and that he has queen and one small trump only, and he plays out his queen, in hopes his partner may win the king if it is put upon the queen; not considering that it is about two to one that his partner has not the ace; and supposing he has the ace, he and his partner

ed,

ual hat be-

one but it is

that has

fuit, of one

may

the his ner, play two honours against one, and consequently weaken their game. Notwithstanding, this method of play is often practised by middling players.

VIII.

If all the trumps are played out except one, and he has three or four winning cards in his hand of a fuit which has been played, with an ace and one fmall card of another fuit, in this case, he should throw away one of his winning cards, because if his right-hand adverfary plays to his ace-fuit, he has it in his power to pass it, and his partner may have a better card of that fuit than the third hand; if fo, and he should have any forcing card, or one of his partner's fuit to play to, in order to force out the last trump, his ace remaining in hand, he can bring in his winning cards; whereas if he had thrown away the small card to his ace-fuit, and that the right-hand adversary had led that suit, he had been forced to put on his ace, and loft some tricks.

IX.

When his partner calls at the point of eight before his time, he must play trumps to him as soon as he gets the lead, whether he is strong in trumps or not; as it is a rule at whist, whenever any one calls before his time, he means to inform his partner that he is strong in trumps.

CHAP. XVI.

Various hands of cards, and the method of playing them.

1.

IF he should have ace, king, and one small card of a suit, and his left-hand adversary leads that suit; if he should have four small trumps, and no material suit to lead from; and his right-hand adversary should put up the nine, or any inferior card; he would win it with the ace, and return the lead upon the adversary, by playing the small card of the same suit; from which the adversary will judge that the king lies behind him, and will not put up his queen, in case he has it. By this method of play, a trick may be gained, besides the advantage of letting his partner into the state of his game.

II.

When his partner forces him to trump a card early in the deal, he may depend upon it that he is strong in trumps; except at the points of four or nine; if his partner then should force him, he may make the trick by trumping as fad as he can.

III.

If he should have ace, king, and two or three more of a suit, and should lead the ace, and his partner should play the ten or knave to it.

fuppoling at the same time he should have one fingle card in his hand in any other fuit, and two or three fmall trumps only; he should lead the fingle card, in order to establish a saw; the refult of which will be as follows. That having led that fuit, his partner will have an equal chance of having a better card in it than the last player; whereas, had his partner led the same fuit to him, which probably would have been the strongest, the adversaries would have difcovered the defign of establishing a saw, and would have trumped out, to prevent his making his fmall trumps. The reason of changing his fuit, would be eafily fuggested by his partner, who would turn it to advantage.

IV.

If he should have the ace and deuce of trumps, d of and strong in the three other suits, and is to lead; he should play the ace, and then the f his deuce, that he may put the lead into his partner's hand, in order to take out two trumps for one. If the last player should win that trick, and lead a fuit of which our player has ace, king, and two or three more, he should pass its of it, being an equal wager that his partner has a better card in that fuit than the third hand; if that be the case, his partner can take out two trumps to one, and when he gets the lead, he is to try to force out one of the two trumps remaining. The odds then will still be in favour of his partner's having one of the two trumps, fuppofing two trumps to have been played out.

V.

Ten cards being played out, he having the king, ten, and a small card of a suit, which has not been led, supposing he has made fix tricks, and that his partner leads from that suit, and that there is neither a trump or thirteenth card in any hand; he should not put on the king, unless his right-hand adversary plays so high a card, as obliges him to do it. By not putting on the king, he may make it, upon the return of that suit, and also the odd trick. He may play in the same manner if there should happen to be only nine cards played out. Where the game or odd trick is depending, it should be played otherwise.

VI.

If he should have ace, king, and three or four small cards of a suit not played, and it appears that his partner has the last trump, if he is to lead, he should play a small card of that suit, being an equal wager that his partner has a better card in that suit than the last player. Admitting him to have a better card, it is in his favour, that he makes sive or six tricks in that suit. If he should play the ace and king of that suit, it being two to one that his partner has not the queen, it consequently would be two to one that he would make but two tricks in that suit; risking three or four tricks to gain one.

VII.

If his partner should have ace, queen, knave and many more of a suit, and leads the ace, and then plays the queen; if he should have king, and two small cards of the same suit, he should win the queen with his king; and then if strong in trumps, take out the trumps; by doing this, and having a small card of his partner's suit, he may win many tricks, by not obstructing his partner's fuit.

fa

no

CASE I.

SUPPOSE he has ace, king, and three small trumps, and he is elder hand, with sour small cards of another suit, three small cards of a third suit, and one small card of the sourth suit, by leading the single card, which we will suppose to be won by the last player, trumps will be returned, or a card played to the weak suits, which will give his partner and himself the tenace, by which means they may get the odd trick.

II.

If his partner is to lead, and plays the ace of the fuit of which he has only one, and then plays the king of the fame fuit, and the righthand adverfary trumps it with the queen, knave, or ten, he should not over-trump him, but throw away a small card of his inferior suit, by which means his partner being the last player, gains the tenace, and consequently may make the odd trick. This method may be practised, when he wants four or five points, and is elder hand; by making his partner last player. Indeed, deed, in all parts of the game, the tenace should be attended to, being of great consequence.

Suppose twelve trumps are played out, and feven cards only remaining in each hand, and he has the last trump, with ace, king, and four small cards of a suit; he should play a small card of that suit, being an equal wager that his partner has a better card in that suit than the last player; and if four cards of that suit should happen to be in either of the adversaries hands, he may make five tricks in that suit; whereas, if he had played his ace and king, he could have made but two tricks in that suit. It would have been an equal wager of winning six tricks in that suit, if neither of the adversaries had more than three cards of the said suit.

IV.

Suppose that eight trumps are played out that one of the adversaries has four of those trumps remaining, and he has the other, which is the best, and to lead; he should not play his trump to take out one of the adversary's trumps, because, as there would still be three trumps remaining, and he not one, the adversaries might bring in a long suit, which he could not prevent, for want of his trump.

ld-

1

25

1,56

out

The use of these calculations is, for a whist player to play his cards to the most advantage; for instance.

As the first calculation is two to one that his partner does not hold one certain winning card---Suppose then a suit is led, of which the second player has the king and a small one only, he should put on the king, because the odds are in his favour, that the third player cannot win it.

For the same reason, when he is second player, and to lead, he should play a king in preference to a queen, because it is two to one the ace does not take it, but it is five to sour the queen will be taken by either ace or king, which may be in the third hand.

According to the fecond calculation of its being five to four that his partner holds one certain winning card out of any 1wo; if he has two honours in any suit, he can play to an advantage, knowing it is five to four in favour of his partner's having one of the other two honours, and by the same rule if he is second player, having a queen and one small card, by playing the queen he plays five to four against himself.

It is obvious from the third calculation, which proves it to be five to two that his partner has one card out of any three certain winning cards.

that

that he who plays the knave second hand, having but the knave and one small card of the same suit, must play sive to two against himself; and discovers his game to a great disadvantage; for which reason, he should play the lowest of any sequence which he may hold in his hand, as, the knave, if he has king, queen and knave, the ten, if he has queen, knave, and ten, &c. By so doing, his partner has an opportunity of judging what card to play in that suit according to the odds for or against him.

From the above calculation, if he has ace, king, and two small trumps, he is entitled to win four tricks out of six, provided he has four winning cards of any suit; or five tricks out of seven, if he has sive winning cards of any suit; by playing two rounds of trumps and taking out eight of them, it is five to two but his partner has a third trump, and if it should be so, he

makes the tricks intended.

CHAP. XX.

The TERMS or TECHNICAL WORDS in this Treatife fully explained.

1

2

1

FINESSING,

Is endeavouring to gain a trick, in case the player has the best and third best of a suit in his hand, by putting on the third best, and running the risk of the adversary's having the second best, which being two to one he has it not, the player has thus much the advantage of gaining a trick.

FORCING,

Is obliging the partner or adverfary to trump a fuit of which he has none.

LONG TRUMP,

Is having one or more trumps in hand, when all the rest are out.

LOOSE CARD,

Is a card in hand of no value, and confequently the properest to throw away, POINTS.

Ten constitutes the game; tricks or honours

tell for points towards the game.
QUART,

Is a fequence of any four cards immediately following one another in the fame fuit from quart-major, which is a fequence of ace, king, queen, and knave in any fuit, down to cards of lower denominations.

QUINT,

Is a sequence of any five cards immediately following each other in the same suit. As quint-major, is a sequence of ace, king, queen, and knave, in any suit.

SEE-SAW,

Is when a fuit is trumped by each partner, and they keep playing that fuit to each other for that purpose.

SCORE,

Is the reckoning kept of the game, till ten points are made on one fide or the other.

TENACE,

Is having the first and third best cards, and being the last player, by which means the adversary must inevitably lose the trick, let him play what card he pleases in the suit. For example, if the player who has ace and queen of any suit, and his adversary leads that suit, he must win two tricks by having the best and third best of that suit led, and being the last player.

TERCE,

Is a fequence of any three cards immediately following one another in the fame fuit. As terce-major, is a fequence of ace, king, queen, in any fuit.

CHAP. XXI.

The LAWS of the game of WHIST, as established by the first players in England.

I.

IF any body plays out of his turn, either of the adversaries may call the card played, at any time in that deal, if they think proper, provided it does not cause the person who played out of his turn to revoke; or if either of the adverse parties are to lead, he may desire his partner to name the suit he chuses to have him play, and when the suit is named, his partner must play it if he has it; but, only one of these penalties can be inflicted.

II.

If a revoke happens to be made, the opposite party may add three to his score, or take three tricks from the adversaries, or reduce their score three points; and the party who revoked, provided they are up, notwithstanding the penalty, must remain at nine. The revoke is reckoned previous to any other score.

III.

No revoke to be claimed till the trick is turned and quitted, or the party who revoked, or his partner, have played again.

Co

IV.

IV.

If any persons calls at any point of the game, except eight, either of the adverse parties may call a new deal, and they are at liberty to confult each other, whether they will have a new deal or not.

V.

After the trump card is turned up, nobody ought to remind his partner to call, on penalty of losing a point.

VI.

When the trump card is turned up, no honours in the preceding deal can be reckoned, unless they were before claimed.

VII.

If any person separates a card from the rest, the adverse party may call it, provided he names it, and proves the separation; but if he calls a wrong card, the adverse party may call the highest or lowest of any suit, out of his hand or his partners, the first time either of them are to play.

VIII.

If a card is turned up in dealing, it is optional in the adverse party to call a new deal; but in case either of them have been instrumental ca hig the

m

in

ag

fhe

of or ear

be

lias fev

out of dea

whefor

hav

mental in turning up such card, it is optional in the dealer whether or no he will deal over again.

IX.

If any person discovers a revoke before the cards are turned, the adverse party may call the highest or lowest card of the suit led, or, it is at their option to call the card then played, at any time, when it does not cause a revoke.

X.

If an ace, or any other card be led, and it should so happen that the last player plays out of his turn, whether he has any of the suit led or not, provided he is not caused to revoke, he can neither trump it or win the trick.

XI.

If a card is faced in dealing, the cards must be dealt again, unless it is the last eard.

XII.

It is the business of every player to see that he has thirteen cards dealt to him; therefore, after several tricks are played, if any one should find out that he has had but twelve, and that the rest of the players have had their right number, the deal must stand good; and likewise the person who plays with twelve cards, is to be punished for each revoke, in case any has been made; but if it should appear that any of the players have had sourteen, the deal then is lost.

G 3

XIII.

may connew

ame.

ody

honed,

rest, mes ls a

and are

op.

runtal

XIII.

If any person throws his cards upon the table, with their faces upwards, supposing the game to be lost, the adversaries may call any of the cards once, or oftener, when they think proper, provided they do not make the party revoke; and, he is not to take up his cards again.

XIV.

If any one leads a card, and his partner plays out of his turn, the right-hand adversary may play before his partner who is on the left-hand of the leader.

XV.

If there is a certainty of winning every trick, the player may shew his cards, or throw them down on the table, but if he should happen to have any losing card in his hand, he liable to have all his cards called.

XVI.

If any person calls at the point of eight, and his partner answers, and both the opposite parties have thrown down their cards, and it afterwards appears that the other side had not two by honours, they have a right to consult with one another about it, and are at liberty to stand the deal or not.

XVII.

If any body answers when he has not an honour, the adverse party may consult one another about it, and are at liberty to stand the deal or not.

XVIII

pl

ot

A

D.

XVIII.

The trump card should be left in view upon the table, till it is his turn to play; and after he has joined it to his other cards, no person has a right to demand what card he turned up, but may ask what is trumps: the reason is, that the dealer cannot name a wrong card, which otherwise he might do.

XIX.

No revoke can be claimed after the cards are cut for a new deal. If any body claims a revoke, the adverse party are not to mix their cards afterwards, upon forfeiting the revoke.

XX.

If any body calls at eight, after he has played, it is optional in the adversaries to call a new deal.

XXI.

Suppose A and B are partners against C and D; A plays a card, the adversary C wins it, B plays an inferior card to either; but before D plays, his partner C plays a thirteenth, or some other card; the penalty shall be at the option of A, or B, to oblige D to win the trick if he can.

XXII.

Suppose A and B are partners against C and D, A leads a diamond, C plays the ace of that suit,

e to ards proand,

ble.

lays may and

ick, nem n to e to

and parterby

one the

hoinodeal

III

fuit, B plays a diamond, and D, partner to C, takes up the trick without playing to it; A and the rest of the players, continue playing on, till it appears that D has one card more than the rest of the players; in this case it has been established as a law, that the adversaries have it at their option to call a new deal.

XXIII.

If the dealer, instead of turning up the trump, puts the trump card upon the rest of his cards, with the sace downwards, he loses his deal.

XXIV.

No person should ask his partner if he has any or not of a suit, in case he does not follow suit, or even ask if he is clear, although it is often done at almost every whist table.

P.

A TECHNICAL MEMORY, or an affiftant to those who are WHIST PLAYERS.

I.

LET him place the trumps towards the left of all the fuits in his hand; his best or strong suit next, his next suit third from the left, and his inferior suit to the right.

II.

In the course of play, if he finds he has the best card remaining of any suit, put the same to the right of them, as it certainly must tell after the trumps are drawn out.

111.

If he finds he has the fecond best card of any suit, to remember, let him place it on the right of that card he is already to remember, as the best card remaining.

IV.

If he has the third best card of any suit to remember, let him place a small card of that suit between the second best card and that third best.

V.

That he may remember his partner's first lead, let him place a small card of that suit led, entirely to the lest of the trumps, or trump, in case he has but one.

VI.

When he deals, he may put the trump turned up, to the left of all his trumps, and as it is a kind of rule that he should keep this trump as long as he can, it will consequently be more out of the way, and will be easier for him to remember.

VII.

How to find out where and in what fuit the adversaries revoke.

Let him separate four of his tricks from the rest, remembering the first of those four tricks to stand for clubs, the next for diamonds, the third for hearts, and the fourth for spades; now if he suspects the revoke to have been made in spades, separate the fourth trick a little from the other three, if in hearts, separate the third and fourth from the first and second, and so forth; and like the alphabet, these tricks may affist him; supposing the first trick denotes the letter A, fo as clubs, beginning with C, as it is nearest to the first letter of the alphabet; diamonds beginning with a D, is nearest the fecond, and fo on with hearts and spades; he may very eafily remember the fuit in which he imagines the revoke to have been made. And by removing these towards the adversary he thinks made the revoke, he may recollect which of them it was.

ON THE GAME of

QUADRILLE,

WITH

The MEDIATEUR,
The FAVOURITE SUIT,
The MEDIATEUR SOLITAIRE:

Together with fome new Decisions.

CHAP. I.

Containing a general idea of the GAME, and a particular explanation of the value of the cards.

ALTHOUGH the Game of Quadrille has been in vogue many years, a treatise on this game has never been published, whereby a person who never played the game, might form

form a general idea of it, fo as to be able to

tl

fe

la

il

to

ir

play according to rule.*

In order therefore to render this treatife as perfect as possible, we have collected those rules from the game called Ombre, (from which this game is derived) as well as those practised by the best companies that play at this game, by which means many disputes may be avoided which happen for want of some fixed and established rules to go by.

The first thing to be observed at this game by the players as well as the spectators, is silence; for, without it, no one can properly attend to the game, or make the party agreeable.

This game is played by four persons, with forty cards; which are the remains of a pack, after the four tens, nines, and eights are discarded; these are dealt three and three, and one round four, to the right-hand player; and the trump is made by him that plays with or without calling, by naming spades, clubs, diamonds or hearts, and the fuit named is trumps. If the person who names the trump should mistake, and say spades instead of clubs, or if he names two suits, the first named is the trump.

Of the value of the cards.

Nothing embarrasses the player so much at first, as the order of the cards: he cannot con-

^{*} Mr. Hoyle's treatife on this game, is only fit for the improvement of those who have already learned the game.

ceive why the feven of hearts, or diamonds, or the two of spades, or clubs, are sometimes the second cards of the game, and sometimes the last: but by perusing with attention, the following tables, he will perceive the reason: in the first of which the cards are placed according to their natural value, and in the other, according to the rank they hold when trumps.

In all 12

It is plain by the foregoing tables, as spadill and basto are always trumps, that the red suits have one trump more than the black.

whi

tion

thre

tion

There is a trump between the spadill and basto, which is called manill, and is in black the deuce, and in red the seven; they are the second cards when trumps, and last in their respective suits when not trumps; for example, the deuce of spades being the second trump when they are trumps, and the lowest card when clubs, hearts, or diamonds are trumps; and so of the rest.

Ponto is the ace of hearts or diamonds, which are above the king, and the fourth trump on the cards, when either of those suits are trumps, but are below the knave, and called ace of hearts or diamonds, when they are not trumps. The two of hearts or diamonds is always superior to the three; the three to the four, the four to the five, and the five to the six; the six is not superior to the seven, but when it is not trumps; for when the seven becomes manill, it is the second trump. All which appears by the foregoing table.

There are three matadores; spadill, manill, and basto; the privilege of which is, that when the player has no other trumps but them, and trumps are led, he is not obliged to play them, but may play what card he thinks proper, provided, however, that the trump led is of an inferior rank; but if spadill should be led, he that has manill or basto only, is obliged to play it, it is the same of basto with respect to manill, the superior matadore always forcing the inferior. Though there are properly but three matadores, nevertheless, all those trumps which

nd ck

he

re-

le,

np

en fo

chion is, of is, ince is

which follow the three first without interruption, are likewise called matadores; but the three first only, enjoy the privilege above mentioned. The number of matadores are specified in the second table, by the order of the cards when they are trumps.

H3 CHAP.

CHAP. II.

Of the manner of playing the Game and dealing the cards, of the Stakes, of the manner of speaking, and of the Beast.

E ACH person is to play as he judges most convenient for his own game.

He is not to encourage his friend to play; but each person ought to know what to do,

when it is his turn to play.

The stakes consist of seven equal mils * or contrats, as they are sometimes called, comprising the ten counters and sishes, which are given to each player. A mil is equal to ten sish, and each fish to ten counters: the value of the sish, is according to the players agreement, as also the number of tours +, which are generally fixed at ten, and marked by turning the corners of a card.

If the cards should happen not to be dealt right, or that there should be two cards of the same fort, as two deuces of spades, for example, there must be a new deal; provided it is discovered before the cards are all played.

The cards must likewise be dealt over again in case a card is turned in dealing, as it might be of prejudice to him who should have it;

+ See the dictionary.

ai

h

V

I

2

^{*} See the dictionary at the end of this treatife.

GAME of QUADRILLE. 91 and of course if there should be several cards turned. There is no penalty for dealing wrong, he who does so must only deal again.

When each player has got his ten cards, he that is on the right hand of the dealer, after examining his game, and finds his hand fit to play, asks if they play; or if he has not a good hand, he passes, and so the second, third, and fourth. All the four may pass: but he that has spadill, after having shewn or named it, is obliged to

play, by calling a king.

Whether the deal is played in this manner, or that one of the players has asked leave, no-body chusing to play without calling, the eldest hand must begin the play, first naming his suit, and the king which he calls; he who wins the trick plays another card, and so of the rest till the game is finished. The tricks then are counted, and if the ombre, that is, he who stands the game, has, together with him who is the king called, fix tricks, they have won, and are paid the game, the consolation, and the matadores, if they have them, and divide what is upon the game, and the beasts, if there are any.

But if they make only five tricks, it is a remife, and they are beafted, what goes upon the game, paying to the other players the confolation, and the matadores. If the tricks are equally divided betwist them, they are likewife beafted, and if they make only four tricks between them, it is a remife; if they make lefs, they lofe codill, and in that cafe they pay to their adversaries what they should

have

ling r of

nost ay;

do,

or ori-

th, he nt, ne-

alt he le,

in ht

nd

have received if they had won; that is, the game, the confolation, and the matadores, it they have them, and are beafted what is upon the game: they who win codill, divide the stakes.

The beaft, and every thing else that is paid, is paid equally betwixt the two losers; one half by him that calls, and the other half by him that is called, as well in case of codill, as a remise; unless the ombre does not make three tricks, in which case, he that is called is not only exempted from paying half the beast, but also the game, the consolation, and the matadores, is there and any, which the ombre in that case pays alone; and as well in case of codill as a remise. This is done in order to oblige players not to play games that are unreasonable.

There is, nevertheless, one case, in which, if the ombre makes only one trick, he is not beafted alone, and that is, when not having a good hand he passes, and all the other players have passed likewise; he having spadill, is obliged to play. He it would be unjust to oblige him to make three or four tricks; in this case therefore, he that is called pays one half of the losings. For which reason he that has spadill with a bad hand, should pass, that if he is afterwards obliged to play, by calling a king, (which is cal-

He that has once passed, cannot be admitted to play; and he that has asked leave, cannot refuse to play, unless any one should offer to

play with calling.

×

0

No one should play out of his turn; altho'

he is not beafted for fo doing.

If he who is not the eldest hand has the king called, and plays spadill, manill, or basto, or even the king called, in order to shew that he is the friend, having other kings that he sears the ombre should trump, he is not to be allowed to go for the vole; he is even beasted, if it appears to be done with that intent.

It is not permitted to shew a hand, though codill may already be won; that it may be seen

whether the ombre is beafted alone.

If the ombre or his friend shews their cards before they have made six tricks, thinking that they have made them, and there appears a possibility of preventing their making them, the other players can oblige them to play their cards as they think proper.

A player need only name his fuit, when he

plays, without calling a king.

He who plays without calling, must make fix tricks alone to win; for all the other players are united against him, and they are to do what they can to prevent his winning.

He who plays without calling, is admitted to

play

play in preference to him who would play with calling; however, if he that has asked leave, will play without calling, he has the preference of the other who would force him. These are the two methods of play without calling, that are called forced.

As he who plays without calling does not divide the winnings with any person, he confequently, when he loses, pays all by himself; if he loses by remise, he is beasted, and pays each of the other players the confolation, the fans appeller, (which is commonly, but improperly called, the fans prendre) and the matadores, if there are any; if he loses codill, he is likewise beafted, and pays to each player, what he would have received from each if he had won. They who win codill divide what there is; and if there are any counters remaining, they belong to him of the three who shall have spadill or the highest trump the next deal. It is the fame with regard to him who calls one of his own kings, he wins alone, or lofes alone, as in the other case, except the fans appeller, which he does not pay if he lofes, or receive he wins, altho' he plays alone.

If he plays fans appeller, though he may have a fure game, he is obliged to name his fuit, which if he neglects to do, and shews his cards, and says, I play fans appeller; in that case either of the other players can oblige him to play in what suit he pleases, although he should

not have one trump in that fuit.

ler,

he

ave

rds,

n to

He who has atked leave, is not permitted to play fans appeller, unless he is forced; in which cafe, as was faid before, he has the preference of the other that forces him.

A player is not obliged to trump when he has none of the fuit led, nor play a higher card in that fuit if he has it, being at his option, although he is the last player, and the trick should belong to the ombre; but he is obliged to play in the fuit led if he can, otherwise he renounces.

If he separates a card from his game, and shews it, he is obliged to play it, if by not doing it the game may be prejudiced, or if it can give any intelligence to his friend; but especially if it should be a matadore. He that plays fans appeller, or by calling himfelf, is not subject to this law.

He may turn the tricks made by the other players, and count what has been played, as often as it is his turn to play, but not otherwise.

If instead of turning a player's tricks, he turns and fees his game, or shews it to the other players, he is beafted, together with him whose cards he turned; and each of them must pay one half of the beaft.

If any one renounces, he is beafted as often fuit, as he has renounced and it is detected.

A renounce is not made till the trick is case turned.

If the renounce is discovered before the deal ould is finished, and has been detrimental to the game, the cards must be taken up again, and the He game replayed from that trick where the re-

nounce

nounce was made; but if the cards are all played, the beast is still made, and the cards must not be replayed; except there should be several renounces in the same deal: then they are to be played again, unless the cards should be mixed.

If feveral beasts are made in the same deal, they all go together; unless it is otherwise agreed at the beginning of the party; and when there are several beasts, the greatest always

goes first.

CHAP.

A P.

CHAP. III.

Of making the Vole, and the manner of marking and playing the game.

To make the vole, is to win all the tricks, when the player plays fans prendre: or with the affishance of the king he calls.

The vole is paid according as it is agreed, and only takes up what is upon the game; having nothing to do with the beafts, which do not go.

The vole is undertaken when playing either with or without calling, after having won the first fix tricks, he must play down a card, and declare what he intends. If he loses the vole, he must pay what he would have received if he had won it.

* It is not permitted to fee the friend's hand, as it is at Ombre, although the vole is undertaken.

The vole cannot be undertaken, if the king called has not been played.

If he plays forced spadill, he cannot pretend to the vole.

* He who undertakes playing the vole, and does not fucceed, has a right to the stakes, sans prendre, and matadores if he has them, having won the game.

de

th

no

fe

CO

A profound filence should be observed, and nothing done that might in the least induce the friend to undertake the Vole or not; but wait till he who is to undertake it, either plays a card or throws down his game.

These matters will be found more fully explained in the table of laws, at the end of this

treatife.

How to mark and pay the game.

The dealer marks the game, by placing a fish before him. Each of the players put down a counter every deal, which are paid to them that win, with the confolation, and these counters

are added to the beafts that are made.

When there is a beaft, it goes with the stake, and the game that each player pays; nevertheless, he that deals, puts down a fish before him; and the first beast being fourteen, as usual, the second must be forty-two, and the third, sisty-fix; fourteen points is the number by which the game is augmented; that is ten for the fish, which is put down by every dealer, and four for each player's counter; unless the game is doubled, as it is when the first beast is made, and drawn by remise; the first being sourteen, and the second forty-two.

When the deal in which the first beast is made, is drawn by codill, the second beast is only twenty-eight, for the fourteen which co-

dill has drawn is not to be included.

As the game is a counter for every player each deal, for as many remifes there must be so many

GAME of QUADRILLE.

many counters, which are paid by those who lose; either to them that win, or to those by whom they have lost codill. When it is only a remise, the game is not touched, and they pay only the consolation, the matadores, and the sans prendre, if it is one.

The confolation is two counters, which are paid to him or them that stand the game, if they win, or is paid by them if they lose, whether it is by remise or codill---the matadores are also

a counter each.

For each trump that follow the matadores without interruption; a counter is paid, in both winning and losing the same, as for a matadore.

The fans prendre is generally paid the half of what is fixed for the vole, that is, five counters, which those that lose, pay to them that win; or he that loses, to them by whom he loses,

whether by remife or codill.

The fans prendre, and the matadores, are to be demanded before the cards are cut for the next deal; or otherwise they are lost; except in this case, if he who plays sans prendre, either with or without matadores, has not received from either of the players for his game, although the cards are cut, he has a right to demand with the game the sans prendre and the matadores, if he has them.

The beaft, the game and the confolation, are not confined to time, but may be demanded feveral deals after; but no mistake made in counting the beafts can be recalled after the

1 2

deal

is

0-

er fo the deal is finished, for example, if for a beast that should be fifty-six, there is counted only forty-two, and he who wins claims no more, it cannot be rectified after the following deal is played, on account of the embarrassment that it would occasion.

They who win codill, receive what they would have paid if they had loft it, and the winners of codill, divide what is upon the game

between them.

As fish equal in value to ten counters, pays the vole, either to them that win it, or by them that have undertaken it and do not succeed, and it is paid double to him or by him who wins or loses it, when he plays fans appeller. The matadores, the sans prendre, and the rest of the game, is paid as usual.

It is common to play the last tour doubles unless it is agreed to the contrary: by playing double, is to put down double, and to pay double for the game, the consolation, the ma-

tadores, the fans pendre, and the vole.

It is also customary for each player to pay a fish towards the expence of the cards,

CHAP. IV.

The Game of QUADRILLE, with the MEDIA-TEUR, and the FAVOURITE SUIT Also with the MEDIATEUR, and without the FAVOURITE SUIT.

A Great advantage accrues from being eldest hand at quadrille, which often renders it very disagreeable to the rest of the players, being obliged to pass with a good hand, unless they chuse to play alone; and when it happens, that the eldest hand having asked leave, the second player, has three matadores, several trumps in black, and all small cards, he cannot then even play alone, and having no chance of being called, he must pass with this good hand. On account of which, this method has been thought expedient to remedy this defect of the game; each player having an opportunity of availing himself of the goodness of his game, by adding to the usual method of playing the game, that of the mediateur, and the favourite suit.

The first thing to be observed, is that of drawing for places, which is done in this manner: One of the players takes four cards; a king, a queen, a knave, and an ace; each player draws one of these cards; and commonly,

13

he

he who comes in last, draws first. The person who draws the king, sits where he pleases, the queen at his right hand, the knave next the queen, and the ace on the lest of the king. The king draws the savourite suit. The number of cards and persons is the same at this game as the other, and is played in the same manner.

The favourite fuit is determined, by drawing a card out of the pack, and is of the fame fuit during the whole party of the card so

drawn.

A king is the mediateur, which is demanded of the others by one of the players, who has a hand he expects to make five tricks of; and through the affiftance of this king he can play

alone and make fix tricks.

In return for the king received, he gives what card he thinks proper, with a fish; but must give two siih, if it is in the favourite suit. He who asks by calling in the favourite suit, has the preference to him who asks by calling in any other; he who asks with the mediateur, has the preference to him who asks by calling in the favourite suit, and by playing alone, is obliged to make six tricks to win. He who asks with the mediateur in the favourite suit, has the preference to him who asks with the mediateur in any other suit, and is obliged to play alone, and to make six tricks.

If fans prendre is played in any other fuit than the favourite, he who plays it, has the pre-

le,

iit

c-

ce

The only difference between this method of playing the game and the other, is, that when one of the players demands the mediateur, he is obliged to play alone, and to make fix tricks, as if he played fans prendre. In this case, he should judge from the strength of his hand, whether the aid of the king, will enable him to

play alone or not.

With the mediateur, and without the favourite suit, it is played in this manner. The game is marked and played the same as in common, except that a fish extraordinary is given to him who plays the mediateur, and to him who plays sans prendre; that is, he who wins the mediateur, receives thirteen counters from each; and if he loses by remise, he pays twelve to each; and thirteen if by codill. The winner of sans prendre, receives seventeen counters from each; and if by remise he loses, he pays sixteen to each, and seventeen, if by codill.

The vole with the mediateur receives one fish only, as at common quadrille. The beasts are also the same as the common game. The last game is generally played double, and is called paulans; but for those who chuse to play a higher game, they may play the double

colour,

colour, which is called the Turk, and is double of the favourite suit. There is also a higher game than this, called the Auóde, which is, paying whatever is agreed to him who happens to hold the two aces in his hand.

CHAP. IV.

Of Solitaire Quadrille; and of the Mediateur Solitaire, by Three.

SOLITAIRE QUADRILLE, is fo called, because it is played alone without calling. The four players are obliged to pass, if neither of them has a fans prendre game, or is strong enough to demand a mediateur, not having recourse to spadill, as usual; but the two fish are left on the board, and he who deals next, puts down two more, and fo on, till fans prendre is played, or with a mediateur, &c. The beaft augments by twenty-eight counters above what is on the board; and by fifty-fix, on the double poullans.

The Mediateur Solitaire by three, is fo played for want of a fourth person, and is not the less entertaining. The cards are less in number; nine of diamonds and the fix of hearts being taken out. There being the king of diamonds left in the pack, he who can play by demanding a mediateur, may ask the king of diamonds, which will answer the same purpose as when played by four. If one of the players has the two black aces, with the kings, he can play in diamonds, and confequently have all the matadores, which are to be paid him, as at

the mediateur by four.

The

The marking at this game, is the same as that of the mediateur, the dealer putting down two fish before him; it is played without calling, and no recourse can be had to spadill. If any one has not a hand to demand mediateur, or play sans prendre, he must pass; and then the dealer puts down two fish before him, going on till one of the three plays.

The beafts are marked the fame as those at the common mediateur by four, with this difference only, that when a beaft is made by remise, it is augmented as many counters as

there have been passes at the game.

GAME of QUADRILLE. 109 to fet down here; the abovementioned are meant only as examples, and are fome of the best that can be played.

Sans prendre Games that may be played in Red.

With fpadill, manill, ponto, king, two and four, and a king; if eldest hand, trumps should be played three times, by spadill, manill, and ponto, in order to draw out the trumps, that he might not be over-trumped, or lose his

king.

Sans prendre may also be played, with spadill, manill, bafto, knave, four and five; that is, three matadores, fix trumps, and a knave and queen of the fame fuit .- (It is faid of the fame fuit, because that is as good as a king) .--- Suppose the player also to have two fmall cards, either of the fame or of different fuits; if they are of different fuits, and after the king of one of them has been played, the fame fuit is returned, of which he has none, he thould throw away that fause, which will make him a renounce; after which, it it should be played a third time, he should trump with a matadore, and play trumps about three times, which will bring out all the trumps; and then, if the fuit is not played, of which he has queen and knave, he must trump and play one of the two, referving a trump to bring

manill

ing.

fmall eart, ould

mall arts, d be

nall een ould

nall ave

of rts, he

ds le to bring him in again, and then he may play that of the two remaining to make the fixth trick.

He may likewise play manill, basto, ponto, king, two and three, and a king; that is, sour false matadores, six trumps and a king; (they are called false matadores, when spadill is wanted) on the return he then should trump with a false matadore, in order to be over-trumped; and then trump about.

Alfo, manill, ponto, king, queen, two, four,

and five, with a king, may be played.

At the game of quadrille, especially the fans prendre, he should trump about as much as possible; taking care however, not to do it when it is entirely against his game: for if all the trumps should be in one hand, the manner of playing depends upon the strength of his game, and must be judged accordingly.

Games that may be played in Black, Sans prendre.

There being a trump less in black than in red, a smaller game may be played, such as the

following ones.

Manill, basto, queen, knave, six and five, a king, and a queen guarded---likewise spadill, manill, king, seven, sive, and sour, with a king, or a queen and knave of the same suit---also manill, king, queen, knave, six, sive, three, and a king---and likewise, spadill, manill, basto, queen, seven, and a king.

GAME of QUADRILLE. 11

It is to be observed, that on the returns, it is not prudent to trump with small cards, unless there be an absolute necessity of doing it from the situation of the game.

Numberless other games may be played sans prendre, in both colours; but the grand object to be kept in view, is making fix cricks against

the united force of the three adversaries.

Of the Roi rendu, or, king furrendered.

This method of playing quadrille differs from the usual one in the following particulars. He who has the king called, may give it up to him who called it, who must give him a card from his hand in exchange, which the other players have a right to see. But he who having the king called, and a good hand, and gives it up in order to make the ombre lose, is beasted, without the ombre's being exempt from making it also, if he does not win the game; the king called should have three sure tricks to do this.

Six tricks, by him alone, are obliged to be made, to whom the king is given up, against all the rest of the players; and as he does not divide with any one when he wins, so he pays all by himself when he loses.

The king cannot be given up to him that plays forced fpadill, as at common quadrille; which is the same as this in every other

respect.

This

This game is played in some places, by rendering the king by obligation; that is, he who plays, always plays alone; and the last player if all the others have passed, by calling a king, which is given up to him, or spadill, is obliged to play; but this is according to what is agreed.

It is proper we should mention another game that is played, and is called troisdille, it being played by three persons only: but nevertheless, is subject to the laws of qua-

drille, in all respects whatever.

CHAP.

11

who ayer ing, iged

ther lille, but quaCHAP. VI.

The LAWS of the GAME of QUADRILLE.

1.

THE cards must be dealt by sours and threes, and no otherwise, beginning with either one or the other; and if a card happens to be faced in dealing, they must be dealt again, except it is the last card.

II.

If there should be too many or too few cards in the pack a new deal is required.

III.

If there are two cards of the fame fort, and it is perceived before the deal is finished, it becomes void; but if all the cards are played, it flands good, as well as any preceding ones.

IV.

He who deals wrong, is not beafted, but deal again.

K a- V. If

P.

V

If he who plays either fans prendre, or by calling, names another fuit than that in which his game is, or if he names two fuits, that which he first named must be trumps, and he cannot recall it.

VI.

The player must name the suit he plays in, by its proper name; as well as the king he calls.

VII.

He who has asked leave is obliged to play.

VIII.

He who has passed, must not be admitted to play, unless he plays forced spadill.

IX.

He who has asked leave, cannot play sans prendre, unless he is forced to it.

X.

He who has asked leave, is admitted to play sans prendre, in preserence to the player that sorces him.

XIV.

No one should play out of his turn, altho' he is not beasted for so doing.

XV.

He who not being eldest hand, and having the king called, shall trump out with spadill, manill, or basto; or shall even play the king called, in order to shew that he is the friend; shall not be allowed to go for the vole---he shall even be beasted, if it appears that he did it with a bad intention.

XVI.

He who has feparated a card from his hand, and has shewn it, is obliged to play it, if the game may be prejudiced by not so doing; or if it can give any information to his friend, especially if it should be a matadore. He who plays sans prendre is not subject to this law; nor he who, calling himself, plays alone.

XVII.

He who has none of the suit led, is not obliged to trump, nor to play a higher card in that suit, if he should have it.

XVIII.

It is not allowed to turn the tricks of the other players, in order to see what has been played.

XIX.

Neither is it permitted to turn the tricks, or count aloud what has been played; but when you are to play, each player must count his own game,

XX.

If any one turns and fees the game of one of the players, under pretence of turning the tricks, he is beafted, together with him whose cards he has turned, each paying one half of the beaft.

CHAP. VII.

A dictionary of the technicals made use of at the game of quadrille.

TO ASK LEAVE, is to play, by calling a

BASTO, is the ace of clubs, which is always

the third trump.

BEAST, is a penalty which confifts in paying as many counters as there are down; and is incurred either by renouncing, or by some other fault; also, by not winning when the player stands the game.

CHEVILLE, is to be between the eldest hand and the dealer, which is called, to be in

cheville.

CODILL, is when those who defend the pool, make more tricks than they who stand the game; which is called, winning the codill.

CONSOLATION, is a claim in the game, always paid by those who lose, to the winners;

whether by codill, or remise.

DEVOLE, is when he who stands the game

makes no trick.

DOUBLE, is to play for double stakes, in respect to the game, the consolation, the sans prendre, the matadores and the devole.

FORCE. The ombre is faid to be forced, when a strong trump is played for the adversary

v he

the

to over-trump; he is likewise said to be forced when he asks leave, and one of the other players obliges him to play sans prendre, or pass, by offering to play sans prendre.

FRIEND, is the player who has the king

called.

INPASSE, to make the inpasse, is, when being in cheville, the knave of a tuit is played of

which the player has the king.

MANILL, is, in black the deuce of spades or clubs; in red, the seven of hearts or diamonds, according to the suit played in; and is always the second trump.

MARK, the game is marked by the fish,

which they who deal put down.

MATADORES, there are three matadores, viz. spadill, manill, and basto, which are the three first trumps; but their number is encreased according to the number of trumps that are joined to them without interruption; and when spadill is wanting to make up the number compleat, they are called false matadores.

MILLE, is a mark of ivory, which is some-

times used, and flands for ten fish.

OMBRE, is the name given to him who flands the game, by calling or playing fans appeller.

PARTY, is the duration of the game, according to the number of tours that are agreed

to be played.

PASS, is the term used when the player has not a hand to play; he then says, pass.

PONTO, is the ace of diamonds, when dia-

END OF QUADRILLE.

TREATISE

ON THE GAME of

I Q U E T.

CHAP. I.

The manner of playing the Game of Piquet.

THIS game is played by two persons only, and with thirty-two cards, viz. the ace, king, queen, knave, ten, nine, eight, and seven of each suit; and these cards keep the same rank in which they are here placed; the ace being above the king, the king the queen, the queen the knave, &c. And in telling the game, the ace reckons eleven, the king, queen and knave, ten each; and the small cards, each according to the number of its pips, as ten, nine, eight or seven.

As foon as it is agreed what to play for, and how many points conflitute the game, the players must then cut for the deal, and he that cuts the lowest piquet card deals first; in order to which he shuffles the cards, and presents them to the elder-hand, who, if he pleases.

mav

who lay-

ng;

this

.

hen s to

ked ass.

ais.

who

ple,

who

the

may shuffle them likewise, in which case the dealer has a right to shuffle them a second time, after which they are cut by the elder hand. But if he cuts only one, or drops a card in cutting, the dealer has a right to shuffle them again.

The cards are to be dealt by two and two, and no other way; the players are to have twelve cards dealt them, and there will then remain eight cards, which are called the talon or flock, and are to be placed on the board, di-

rectly between the two players.

In order to give a general idea of the game, as we have proposed, it is necessary to observe here, that if the elder or younger hand has thirteen cards dealt him, it is at the option of the elder hand either to play the cards, or to have a new deal; and if he chuses to stand the game, he is to lay out one more than he takes in, so that there may be three cards left to the dealer. If the younger hand has thirteen cards, he must in like manner lay out one more than he takes in; and if either party has sourteen cards dealt him, there must be a new deal.

If there should be a faced card in the stock, it does not hinder the deal from being played, provided, it is not the first card of the stock, or the first of those three that belong to the dealer; for then, the card being seen by both parties, there must necessarily be a new deal: because if it was left to the option of the player to whom the card belongs, he would have the advantage either to play if he liked his hand, or to refuse

if

if he did not, which would be unjust, as the cards being faced is not the fault of either party. But in case of either of the players turning or seeing one or more of his adversary's cards, the offender is only obliged to lead in such suit as his adversary shall think proper, and that, as often as he has seen cards. See the law in this case.

We shall now explain what are called the hazards; of which there are three, the repique, the pique, and the capot. The repique is made when either of the players reckons thirty in his hand, before his adversary can count one, in which case, instead of thirty, he reckons minety.

The pique is when the elder hand makes out thirty by the cards he has in his hand, and by the cards that he plays before the adverfary makes one; in that case, the elder scores sixty, and as many more as he reckons additional points in play.

The capot is, when either of the players wins very trick, for which he scores forty; wheresten points are taken for winning the majority of tricks only.

It is a mistake of those players who think, hat all the three hazards cannot be made at he same time; for all judges agree, that the apot may be joined to the pique or repique; and which indeed frequently happens. For xample, let us suppose that the elder hand has be sour tierce-majors, which are allowed to be cood---he enters then with four for his point, and twelve for the sour tierce-majors, which take sixteen; and sourteen for the quatorze

of aces, make ninety; and twenty-eight for the quatorze kings and queens, make an hundred and eighteen, and thirteen he tells in play make an hundred and fixty-one; which, added to the forty for the capot, make two hundred and one This chance is fo extraordinary, that perhaps it may never happen: however, in case it did happen, it is but just that it should be allowed.

In order to make the pique, that is to recket fixty inflead of thirty, he that makes it, mul be elder-hand; for if he was the dealer, the elder would play a card and count one; and is that case, if the dealer was to count twenty span nine in hand, and won the card that the elde and played, he would flill count but thirty, unles blar the elder hand should play a card that does no count, as a nine, eight or feven; then indeed after the dealer has won the trick, he may blan go on to thirty, reckon fixty, and make the pique.

We must here observe, that the carte blanche which is good for ten points, counts first, elpe cially, when the two players are near the con clusion of the game; after which follow the point and sequence; and then, the point or p which are told in play; and laftly, the to points for the cards, or forty for the capot.

CHAP. II.

one. Of the CARTE BLANCHE, and of the manner of discarding. hap

AFTER the player has examined his twelve cards, he should, the better to understanding his game, range the different fuits: that is, to place the hearts with the hearts, the fpades with the fpades, the clubs with the clubs, and the diamonds with the diamonds.

He is then to observe whether he has a carte inles blanche, that is, if he has no figured cards in his hand; fuch as kings, queens, and knaves. If either of the players finds that he has a carte blanche, after the adversary has discarded, he must show it down on the table, and tell them one after the other, to show that he has twelve cards; which, as was faid before, reckons for ten, and takes place before the point itself, and ferves towards making the pique and repique, or prevents them from being made.

When the players have examined their hands, and whether either of them has carte blanche. or not, the eldest hand must make his discard; that is, he picks out five eards from his hand that he thinks of the least value, and lays them on one fide, in order to take in as many from

the eight cards called the talon or flock.

He

ex

he

the

ten

oth infe adv kna

tora

kna

him

He must not take more than five, but at rig many less as he pleases, except one, which he is on obliged to take; he has a right to fee those cards the that he might have taken, and, whether he has he left the dealer any cards or not, the dealer is likewise at liberty to leave as many of them at he pleafes, except one, which he is also obliged he to take; if the dealer leaves any cards, he has a har right to fee them; and if he looks at them, the on elder hand may do the fame, first naming the tire fuit he intends to lead; if the dealer should leave any cards, and mix them with his discard, the in, elder-hand has a right to fee the whole; first two naming the fuit he leads, as in the other case; this and if he should either by design or accident, he lead another fuit than that which he named, he is tor obliged to lead in what fuit the dealer pleases.

These rules being intended more for beginners than for experienced players, it will be ne-cessary, en' passant, to point out the princial ends that should be kept in view in making the

difcard.

The two first ends proposed in discarding by good players, are, to get the point and the cards; to do which, it it a general rule, to he keep that fuit for point, of which they have adverthe most; or at least, in which they are strong the aft: it is however, fometimes better to carry forty-one of one fuit, than forty-four of another, where there is no prospect of making eight a quint; or even if there should be a small of a quint with the forty-four, it may fill be right

ut as right to prefer the forty-one, if by taking in he is one card only, a quint major is made, and the point and cards gained, which could not be done with the forty-four, without a very extraordinary take-in.

the

110.

ing

nall

gh

When the player goes for a great game, liged he is to discard differently from what he would has a have done if he went for a common game the only; for in the former case, he depends entirely upon the taking-in, whereas in the latter, eave he carries fuch cards, as with a common takethe in, he is able to make good his fcore; that is, first twenty-seven points for the elder hand, and ase; thirteen points for the dealer. In discarding, lent, he should likewise endeavour to get the quaheir torzes, which are the four aces, the four kings, s. I the four queens, the four knaves, and the four gin. tens; the four aces are preferable to any of the others; having them, he can count any other inferior ones, as a quatorze of tens tho' the adversary should have the kings, queens or knaves. By the same rule, if there is no quaby torze, he can count three aces, kings, queens, the knaves or tens, which he should consider when to he discards, the lowest quatorze preventing the adversary from reckoning three aces, and so of ong the rest. A good quatorze not only entitles arry him to reckon inferior ones, but also three tens, or any other three, excepting those of nine, eight, or feven, altho' there should be three of a superior value in the adversary's hand.

> Thefe M 2

These rules are to be observed by the player, in respect to the sequences, that is, the hustiemes, feptiemes, fixiemes, quints, quarts and tierces; and when he difcards, he should consider how he might take the best chance of making them by Conta his take-in; an explanation of these terms, with an account of their value, will be found in the next chapter.

th th

picti

It b fix refp recl v-f ver.

es;

by

ms, und

CHAP. III.

Containing an explanation of the point, and of the sequences; with some further remarks on the discard.

THE amount of fo many cards in any one fuit, when added together, is, what is called the point; the ace tells for eleven, the picture cards ten each, and the small cards

according to the number of their pips.

As foon as the point is reckoned by the elder hand, he calls it, mentioning the number it amounts to, and asks if it is good; to which the adversary replies according to his hand, if he has not so many, that it is good. If he has an equal number, he fays equal; and if he exceeds the elder hand, he fays, not good. The point then is reckoned by him who has the superiority in number, counting as many for the point as he has cards, which conflitute the whole; except for example, he has fix cards that make only forty-four, he reckons but five, whereas, had they made fiftyfive, he would have counted fix; and fo in respect to fixty-four, and forty-four, which reckon no more than the number of their tens ; the fifth point always making up the ten; thirty-five points being equal in value to forv-four, each counting four. However, in some

companies, they make every card reckon for po one, whether the amount of the whole is more the or less than forty-five, fifty-five, &c. If their kn points are both equal, neither of them reckon to any thing for point. If the two players have the same sequence, the same rule is observed, unless one of them makes his sequence good by having a superior quint, quart, tierce, &c. to what his adversary has.

Of the huitieme, the septieme, the fixieme, the quint, the quart, and the tierce.

We shall begin by observing, that there is but one huitieme, which confifts of all the eight cards in the fame fuit, viz. the ace, king, queen,

knave, ten, nine, eight, and feven.

There are two septiemes; the septieme-major, composed of the ace, king, queen, knave, ten, nine, and eight; and the septieme to a king, confisting of king, queen, knave, ten,

nine, eight and feven.

There are three fixiemes, the first, called fixieme-major, confifts of the ace, king, queen, knave, ten, and nine; the fecond, to a king, is composed of the king, queen, knave, ten, pine, and eight; and the third, to a queen, confifts of the queen, knave, ten, nine, eight and feven.

There are four quints; the first is, the quintmajor, and confifts of the ace, king, queen, knave and ten; the fecond, to a king, is com-

rved, The quarts are of five different forts; the d by first, called quart major, consists of the ace, c. to king, queen, and knave; the fecond, called quart to a king, is composed of the king, queen, knave and ten; the third, to a queen, confifts of queen, knave, ten and nine; the fourth, to a knave, is composed of the knave, ten, nine and eight; and the fifth, called quart boffe, confifts of ten, nine, eight and feven.

There are fix forts of tierces; the first, called tierce-major, is composed of the ace, king and queen; the fecond, called tierce to a king, is the king, queen and knave; the third, to a queen, is the queen, knave, and ten; the fourth, to a knave, is the knave, ten and nine; the fifth, to a ten, is the ten, nine and eight; and the fixth, which is called tierce baffe, is

composed of the nine, eight and seven.

A tierce, that is allowed good, reckons for three; a quart, for four; a quint, fifteen; a fixieme, fixteen; a septieme, seventeen; and a huitieme, eighteen; besides what they reckon for point. For example, a quart that is good, reckons four as a quart, and four for the points, which make eight; a quint, reckons five for the point, and fifteen as quint, which make twenty; and fo in like manner with the reft.

If

140

If there should be an equality betwixt the highest sequence in each hand, and either of them should have several others of equal or inserior value, neither one or the other can reckon any thing for them; the equality between the superior ones having destroyed the validity of them all.

CHAP.

CHAP. IV.

Of the manner of calling the game, and playing the cards.

AS foon as each party has discarded and taken in, the cards must be forted, and then they must examine their hands, and prepare their points. The elder hand reckons his point and names it, to which the dealer makes his reply, good, equal, or, not good; according to the inferiority, equality, or fuperiority of his own. The fequences are called next by the elder hand, if he has any, and they are pronounced to be good, equal or not good, by the dealer, according to his cards, as before. If the point and fequences should be good, they must be shewn down on the table before the first card is played; for it either of the players forget to shew them in time, he is not allowed to reckon them, and the adverfary is allowed to shew and reckon his, although inferior. If both the players forget to shew them before their first cards are played, neither of them are entitled to reckon them.

The quatorzes are next to be confidered, and if any one is good, it reckons for fourteen, and enables him who has it, to reckon three aces, kings, queens, &c. If there should be

the of

can be-

the

no quatorze, three aces, kings, queens, knaves, or tens must be looked for; and he who has the fuperior ones, reckons three for each.

When the elder hand has examined his cards, and finds by calling, what he has is good. He begins by counting the carte blanche, if he has it, which is good for ten points; then he counts his point, if it is good, which, supposing to be fifty, he throws down and reckons five; ten and five make fifteen-After which his fequence is counted, and if his quart is good, he shows it down likewise, and counts four---which together make nineteen; he then proceeds, and if he has a quatorze or three aces, or any other threes that are good, he adds them as before. Having finished the count of his hand, he plays a card, and if it is a figure or tenth card, he reckons one for it, those being the only cards that count in play; unless the players agree to count every card.

When the elder hand has played a card, if the dealer has the point, or any fequence that is good, he shows them down, and reckons them; and if he has quatorze, or any three that is good, he reckons them likewife, as well as carte blanche, if he should have it. Having counted all his hand, he plays in the fame fuit that was led by the elder hand, if he has any of it, and if he wins the trick, he leads what card and in what fuit he pleafes.

As the game of piquet is supposed to admit of nothing done by furprize, he that in playing

and

T

changes his fuit, is to name the fuit to which he changes; in case he does not, the adversary, supposing that he still continues to lead in the former suit, may take up the card that he has played, altho' he should even follow suit.

As it is impossible to become a good player without practice, we shall only make a few general observations, and lay down some rules

for playing the cards.

A player should carefully observe what the adversary has shown, and what he has called; then, by comparing his own hand with the cards he has laid out, he may nearly judge of the cards the adversary has in his hand, and of those he discarded. The consequence of which is, by playing his cards accordingly, he may get the majority of tricks, for which he scores ten points, and is, no doubt, a considerable advantage at this game.

It is necessary here to observe, that there is no trump at piquet, but the best card of the suit wins the trick, the same as at whist; neither is there any penalty for not following suit, altho' the player has one in that suit led in his hand, being at liberty to take up his card and

play down another.

When all the cards are played, except the last, he who wins it with a card that counts, reckons two, and if it is not a figured or tenth card that wins it, he reckons one for the last trick.

The two players then count their tricks, and he who has the most, scores ten for the cards.

ther-

as at

arch, oints

> If he is greatly advanced in the game, as being eighty to fifty, it is his interest to let the adversary gain two points for his one, as often as he can, especially if he is to be elderhand next deal; but supposing he is to be younger hand, and the game at the fame stage, he should not even then fear losing two or three points to gain one; because that points brings him within his shew.

> Either the elder or younger-hand should fometimes fink one of his points, fuch as a tierce, three kings, queens, &c. in order to win the cards; when this is done with judgment and without hefitation, it often fucceeds.

Again, it is good play fometimes, for the younger hand, to fink one card of his point, which which his adverfary may suppose to be a guard to a king or queen, and thereby may gain such an advantage in playing the cards, as to get the majority of tricks.

The younger-hand should generally have his queen suits guarded, in order to make points Ho

and in playing them to fave the cards.

tmong ain to hour and that to to helps

If the elder-hand is fure of making the cards equal in playing them, and is more advanced in the game than his adversary, he should risque the losing of them; but, on the contrary, if his adversary is many points a head of him, he should risque the losing of the cards, in hopes of gaining them.

CHAP. VI.

oints, How to lay money at the game of Piquet to the best advantage.

THE elder-hand has always five to four the best of the game at starting, therefore, the person who wants to lay his money and have the dealer, he must take the odds.

It is about two to one that the younger-hand is not lurched by the elder-hand; and that the younger-hand does not lurch the elder-hand, it is near four to one.

If a partie * at piquet is played, the odds in favour of him who is elder-hand at starting, is about twenty-three to twenty.

Suppose the players have one game each, he who is elder-hand, has above five to four the best of the partie.

Suppose one of the players has two games love before they cut for the deal, the odds are above four to one that he wins the partie.

If the elder-hand has two games love, the odds are about five to one that he wins the partie.

Suppose the younger-hand has two games love, the odds are about three and an half to one that he wins the partie.

^{*} The first three games in five.

If one of the players has two games to one before they cut, the odds are above two to one in favour of the two games.

If the elder-hand has two games to one, the

odds are about eleven to four in his favour.

If the younger-hand has two games to one, The odds in his favour are about nine to five.

If the elder hand has one game love, the odds are about feventeen to feven in his favour.

If the younger-hand has one game love, the I. odds are about two to one in his favour.

CHAP.

m

CHAP. VII.

one. The laws of the game of Piquet, according to the ve. decisions of the best players.

the I. IF either of the players has thirteen cards dealt him, it is at the option of the elder-hand, either to play the cards, or to have a new deal, as he shall think it most advantageous for his game; but if either of the players has four-teen cards or more, there must be a new deal.

II. If the elder-hand has thirteen cards, and chuses to play them, he must lay out one more than he takes in; because the younger-hand must have his three cards; if the younger-hand should have thirteen, the elder must take in the same cards as if the stock was right; and the younger must lay out three and take in two. In either case, he who has thirteen cards, must acquaint the other of his intention before he takes in; for after he has seen the cards, the game must be played, under the penalty of playing with more than twelve cards, which is, to reckon nothing.

III. He who takes in more cards than he lays out, or in playing, is found to have more cards than he has a right to, reckons nothing; at the fame time his adversary can reckon every, thing he has, altho' much inferior to what he

2

to one

e, the

e odds

may

IV. He who plays with less than twelve cards, can count all that he has, as it is no fault to have too few cards; but his adversary always counts the last card, for which reason, he cannot be capoted, and is an advantage over the other, who very probably may, for want of a twelfth card.

V. He who forgets at the beginning to count carte blanche, his point, or the aces, kings, queens, &c. or any fequence which he may have good in his hand, cannot reckon them afterwards.

VI. He who omits shewing his point, sequence, &c. before he plays his first card, which he may have better than his adversary, cannot reckon them afterwards---in which case, the elder-hand whose point, sequence, &c. or threes of any fort, which were not allowed to be good, has a right, provided he has not played his second card, to count his game, which he had not shewn or called.

VII. At the end of every game the players must cut for the deal, unless it is agreed to deal alternately throughout the whole partie.

VIII. No player can discard twice; as soon as he has touched the stock, whatever cards he

has discarded, he cannot take in again.

IX. Neither of the players can fee the cards he is to take in, before he has discarded; for which reason, when the elder-hand leaves any of the take-in cards, he must mention how many he leaves, or how many he takes in.

TREATISE

ON THE GAME of

BACKGAMMON.

CHAP. I.

Manner of playing the Game.

THIS game is played by two persons upon a table, divided into two parts, upon which there are twenty-four black and white spaces, called points. Each adverfary has fifteen men, black and white, to diffinguish them; and they are disposed of in the following manner: suppoling the game to be played into the right hand table, two are placed upon the ace points in the adverfary's table, five upon the fix point in the opposite table, three upon the cinque point in the hithermost table, and five on the fix point, in the right-hand table. The grand object in his game is for each player to bring the men round into his right-hand table, by throwng with a pair of dice those throws that contribute

ba

th

gr

m

m

the

ve

de

up

Ail

beg

tribute towards it, and at the same time prevent the adversary doing the like. The first best throw upon the dice is esteemed aces, because it stops the fix-point in the outer table, and fecures the cinque in the thrower's table, where. by the adversary's two men upon the thrower's ace-point cannot get out with either quatre, cinque, or fix. This throw is an advantage often given to the antagonist by the superior player.

Directions how a player is to carry his men home.

When he carries his men home in order to lofe no point, he is to carry the most distant man to his adverfary's bar point, that being the first stage he is to place it on; the next stage is fix points farther, viz. in the place where the adversary's five men are first placed out of his tables. He must go on in this method till all his men are brought home, except two, when by losing a point, he may often fave the gammon, by throwing two fours or two fives.

When a hit is only played for, he should endeavour to gain either his own or adversary's cinque point, and if that fails by his being hit by the adverfary, and he finds him forwarder than himself, in that case, he must throw more men into the adverfary's tables, which is done in this manner: he must put a man upon his cinque of bar point, and if the adversary neglects to hit is he may then gain a forward game inflead of

back game; but if the adversary hits him, he should play for a back game, and then the greater number of men which are taken up, makes his game the better, because by these means he will preserve his game at home; and then he should endeavour to gain both his adversary's ace and trois points, or his ace and deuce points, and take care to keep three men upon the adversary's ace point, that in case he hits him from thence, that point may remain still secure to himself.

A back game should not be played for at the beginning of a fet, because it would be a great disadvantage, the player running the risk of a

gammon to win a fingle hit.

CHAP. II.

Rules for playing at setting out all the throws on the dice, when the player is to play for a gammon or for a single hit. Those for a gammon only, are marked thus +.

I. TWO aces are to be played on the cinque point, and bar point, for a gammon or for a hit.

II. Two fixes, to be played on the adversary's bar point, and on the thrower's bar point, for a gammon or hit.

III. † Two trois, to be played on the cinque point, and the other two on the trois point in

his own tables, for a gammon only.

IV. † Two deuces, to be played on the quatre point in his own tables, and two to be brought over from the five men placed in the adversary's tables for a gammon only.

V. † Two fours, to be brought over from the five men placed in the adverfary's tables, and to be put upon the cinque point in his own tables,

for a gammon only.

GAME of BACKGAMMON.

VIII. Size deuce, a man to be brought from the five men placed in the adversary's tables, and to be placed in the cinque point in his own ables, for a gammon or for a hit.

1X. Six and three, a man to be brought from the adverfary's ace point, as far as he will go,

for a gammon or for a hit.

X. Six and four, a man to be brought from the adversary's ace point, as far as he will go, for a gammon or for a hit.

XI. Six and five, a man to be carried from the adversary's ace point, as far as he can go,

for a gammon or for a hit.

XII Cinque and quatre, a man to be carried from the adversary's ace point, as far as he can go, for a gammon or for a hit.

XIII. Cinque trois, to make the trois point

in his table, for a gammon or for a hit.

XIV. Cinque deuce, to play two men from the five placed in the adversary's tables, for a

gammon or for a hit.

XV. + Cinque ace, to bring one man from the five placed in the adversary's tables for the cinque, and to play one man down on the cinque point in his own tables for the ace, for a gammon only.

XVI. Quatre trois, two men to be brought from the five place in the adversary's tables, for

a gan mon or for a hit.

XVII. Quatre deuce, to make the quatre point in his own tables; for a gammon or for a hit.

XVIII, † Quatre ace, to play a man from the five placed in the adversary's tables for the O 2 quatre

or a

que a or

or a que nt in

quabe the

d to bles,

the id to

t for

quatre, and for the ace, to play a man down upon the cinque point in his own tables, for a gammon only.

XIX. + Trois deuce, two men to be brought from the five placed in the adversary's

tables, for a gammon only.

XX. Trois ace, to make the cinque pointin

his own tables, for a gammon or for a hit.

XXI. † Deuce ace, to play one man from the five men placed in the adversary's table for the deuce; and for the ace to play a man down upon the cinque point in his own tables, for a gammon only.

Rules how to play the chances that are marked thus *, when a hit is only to be played for.

* Two trois, two of them to be played on the cinque point in his own tables, and with the other two he is to take the quatre point in the adversary's tables.

* Two deuces, two of them are to be played on the quatre point in his own tables, and with the other two he is to take the trois point in

the adversary's tables.

By playing the two foregoing cases in this manner, the player avoids being shut up in the adversary's tables, and has the chance of throw-

ing high doublets to win the hit.

* Two fours, two of them are to take the adversary's cinque point in the adversary's tables, and for the other two, two men are be brought from the five placed in the adversary's tables.

Cinque

ec

pe

th

th

30

in

of

CHAP. III.

Observations, hints, and cautions, worthy a player's notice.

THE player must understand by the directions given to play for a gammon, that he is to make some blots on purpose, the odds being in his favour that they are not hit; but if it should happen that any blot is hit, as in this case there will be three men in the adversary's tables, he must then endeavour to secure the adversary's cinque, quatre, or trois point, to prevent a gammon, and must be very cautious of his fourth man's not being taken up.

He must not crowd his game at any time if he can help it; that is to say, he should not put many men either upon the trois or deuce points in his own tables, being the same as losing those men, not having them in play. Besides, by crowding the game, and attempting to save a gammon, the player is often gammoned. His game being crowded in his own tables, the adversary has room to play as he thinks proper.

The following calculations will shew the odds of entering a single man upon any certain number of points; and accordingly the game should be played.

Directions for the player to bear his men, with fome useful observations.

If a player has taken up two of the adverfary's men, and happens to have two, three, or more points made in his own tables, he should spread his his men, that he either may take a new point in his tables, or be ready to hit the man which the adversary may happen to enter. If he finds upon the adversary's entering, that the game is upon a par, or that the advantage is on his own side, he should take the adversary's man up whenever he can, it being twenty-sive to eleven that he is not hit. Except when he is playing for a single hit only; then, if playing the throw otherwise, gives him a better chance for it, he ought to do it.

It being five to one against his being hit with double dice, he should never be deterred from taking up any one man of the adversary's.

If he has taken up one of the adversary's men, and should happen to have five points in his own tables, and forced to leave a blot out of his tables, he should endeavour to leave it upon doublets preferable to any other chance, because in that case, the odds are thirty-five to one that he is not hit; whereas, it is only seventeen to one but he is upon any other chance.

When the adverfary is very forward, a player should never move a man from his quatre, trois, or deuce points, thinking to bear that man from the point where he put it, as nothing but high doublets can give him any chance for the hit. Instead of playing an ace or a deuce from any of those points, he should play them from his own fize or highest points, so that throwing two fixes, or two fours, his fize and cinque points being eafed, would be a confiderable advantage to him; whereas, had they been loaded, he must

have been obliged to play otherwife.

It is the interest of the adversary to take up the player as foon as he enters. The blot should be left upon the adversary's lowest point; that is to fay, upon his deuce point, rather than upon his trois point; or upon his trois point rather than his quatre point; or upon his quatre point preferable to his cinque point, for a reason before mentioned; all the men the adversary plays upon his trois, or his deuce points, are deemed loft, being greatly out of play; fo that those men not having it in their power to make his cinque point, and his game being crowded in one place and open in another, the adversary must be greatly annoyed by the player.

If the player has two of the adversary's men in his tables, he has a better chance for a hit than if he had more, provided his game is forwarder than that of his antagonist's; for if he had three or more of the adverfary's men in his ables, he would stand a worse chance to be

cause

When a player is running to fave the gammon, if he should have two men upon his ace point, and several men abroad, altho' he should lose one point in two in putting his men into his tables, it is his interest to leave a man upon the adversary's ace point, because it will prevent his adversary from bearing his men to the greatest advantage, and at the same time the player will have a chance of the adversary's making a blot, which he may chance to hit. However, if a player finds upon a throw, that he has a probability of saving his gammon, he should never wait for a blot, as the odds are greatly against his hitting it, but should embrace that opportunity.

CHAP. V.

Shewing how to calculate the odds of faving or winning a gammon.

LET us suppose the adversary has so many men abroad as require three throws to put them into his tables, and at the same time that the player's tables are made up, and that he has taken up one of the adversary's men; in this case, it is about an equal wager that the ad-

verfary is gammoned.

ım.

his he nen

nan

will to me ry's

hit.

he

are

m.

For in all probability, the player has bore two men before he opens his tables, and when he bears the third man, he will be obliged to open his fize or cinque point. It is then probable, that the adversary is obliged to throw twice before he enters his men in the player's tables, and twice more before he puts that man into his own tables, three throws more to put the men which are abroad into his own tables, in all feven throws. Now the player having twelve men to bear, he may be forced to make an ace or a deuce twice before he can bear all his men, and consequently will require seven throws in bearing them, to that upon the whole, it is about equal whether the adversary is gammoned or not.

Suppose a player has three men upon his adversary's ace point, and five points in his own

172

tables, and that the adversary has all his men in his tables, three upon each of his five highest points. Has the player a probability of gammoning his adversary or not?

to

Two critical cases for a back game, with a case of curiosity and instruction, &c.

CASE I.

SUPPOSE the fore-game to be played by A, and that all his men are placed as usual; B has fourteen of his men placed upon his adver-fary's ace point, and one man upon his adver-fary's deuce point, and B is to throw. Who has the best of the hit?

Answer.

if B does not throw an ace to take his adverfary's deuce point, which is 25 to 11 against him, A will take up B's men in his tables, either singly or to make points; and then if B secures either A's deuce or trois point, A will put as many men down as possible, in order to hit, and thereby get a back-game.

It is evident that the back-game is very powerful, confequently, whoever practifes it, mult become a greater proficient at the game than he

could by any other means.

CASE II.

Suppose A to have five men placed upon his fize point, as many upon his quatre point, and

the same number upon his deuce point, all in his own tables. At the same time, let us suppose B to have three men placed upon A's ace point, as many upon A's trois point, and the same number upon A's cinque point, in his own tables, and three men placed as usual out of his tables. Who has the best of the hit?

The game is equal, till B has gained his cinque and quatre points in his own tables, which if he can effect, and by playing two men from A's cinque point, in order to force his adversary to blot by throwing ace, which should B hit, he will have the best of the hit.

A case of curiosity and instruction. In which is shewn the probability of making the hit last by one of the players for many hours, altho' they shall both play as fast as usual.

Let us suppose B to have bore thirteen men, and that A has his sisteen men in B's tables, viz. three men upon his size point, as many upon his cinque point, three upon his quatre point, the same number upon his trois point, two upon his deuce point, and one upon his ace point. A in this situation, can prolong it as aforesaid, by bringing his sisteen men home, always securing six close points, till B has entered his two men, and brought them upon any certain point; as soon as B has gained that point, A will open an ace, deuce, or trois, point or all of them; which done, B hits one of them, and A, taking care to have two or three men in B's tables, is ready

cafe

the

unl

to hit that man; and also, he being certain of taking up the other man, has it in his power to prolong the hit almost to any length, provided he takes care not to open such points as two fours, two fives, or two fixes, but always to open the ace, deuce, or trois points for B to hit him.

A critical game to play.

Suppose A and B place their men for a hit in the following manner; A to have three men upon the fize point in his own tables, three men out of his tables upon the usual point, and nine men upon his adversary's ace, deuce, and trois points; that is, three upon each; and suppose B's men to be placed in his own and his adversary's tables in the same order. So situated, the best player should win the hit. The game being so equal, that in this case the dice

should be thrown for.

Now if A throws first, he should endeavour to gain his adversary's cinque point; this being done, he should lay as many blots as possible, to tempt B to hit him, as it puts him backward, and A thereby gains an advantage. A should always endeavour to have three men upon each of his adversary's ace and deuce points; because when B makes a blot, these points will remain secure, and when A has bore five, six, or more men, A yet may secure six close points out of his tables, in order to prevent B from getting his man home, at which time he should calculate who has the best of the hit; if he finds

GAME of BACKGAMMON. 177 finds that B is foremost, he should then try to lay fuch blots as may be taken up by his adverfary, that he may have a chance of taking up another man, in case B should happen to have a blot at home.

As it is impossible for us to give any farther instructions relative to the game of backgammon without rather puzzling a learner than instructing him, we shall finish this treatise by giving the laws which are to be observed at

this game.

I. If a man is taken from any point, it must be played; if two men are taken from it, they also must be played.

II. A man is not supposed to be played till it

is placed upon a point and quitted.

III. If a player has only fourteen men in play, there is no penalty inflicted, because by his playing with a leffer number than he is entitled to, he plays to a disadvantage for want of the deficient man to make up his tables.

IV. If he bears any number of men before he has entered a man taken up, and which of course he was obliged to enter, such men so borne, must be entered again in the adversary's

tables as well as the man taken up.

V. If he has mistaken his throw and played it, and his adverfary has thrown, it is not in the choice of either of the players to alter it, unless they both agree so to do.

The END of the GAME of BACKGAMMON.

ASHORT

TREATISE

ON THE GAME of

C H E S S.

CHAP. I.

RULES whereby to play the game

THIS game is played upon a French draught-board, with a certain number of pieces which have their different moves according to their forms. There is a row of what is called pawns, these are all alike in form, and are intended to guard or defend the pieces which are placed behind them, on the rows of squares which constitute the kings at the game of draughts. The board is placed reverse to what it is at draughts, the double corners being to the left hand of the players. The pieces are placed in the following order, and have their different appellations, each player having the same number of pieces on his own side of the board; there

are

are two of each, besides the king and queen, which fland in the centre, the queen on the left hand fide of the king, in the square of her own colour; the two which stand on each side of the king and queen, are called bishops; on each fide of the bishops stand what is called a knight; and on each fide of the knights stand, what is called a castle or rook. Before the king and queen and these pieces, stand the pawns, of which in number there are eight, and they move but one square at a time, except the first time, when they may move two. The king also moves but one square at a time, the one straight forward, and the other obliquely; the queen is entitled to every move that any of the pieces have, except the knight; the bishops move obliquely from one end of the board to the other; the knights move either to the right or left, flying as were obliquely over a fquare; and the caffles or rooks, move in a straight line from one end of the board to the other.

This game depends entirely upon defending the king from being checked,* the first of which that is checked so as not to be able to cover, loses the game; for which reason, each piece should be secured as much as possible from being taken, for when the pieces are lost, the king is liable to be checked, and not being able to cover, the game must inevitably be lost.

Is when the king is liable to be taken by any of the adverlary's pieces for want of being covered.

Rule I. In order to begin the game, the pawns must be moved before the pieces, and afterwards the pieces must be brought out to support them. The king's, queen's, and bishop's pawns should be moved first, that the game may be well opened; the pieces must not be played out early in the game, because the player may thereby lose his moves: but above all, the game should be well arranged before the queen is played out. Useless checks should also be avoided, unless some advantage is to be gained by them, because the move may be lost, if the adversary can either take or drive the piece away.

II. If the game is crowded, the player will meet with obstructions in moving his pieces, for which reason he should exchange pieces or pawns, and castle * his king as soon as it is convenient, endeavouring at the same time to crowd the adversary's game, which may be done by attacking his pieces with the pawns, if the adversary should move his pieces out too soon.

III. The men should be so guarded by one another, that if a man should be lost, the player may have it in his power to take one of the adversary's in return, and if he can take a superior piece in lieu of that which he lost, it would be an advantage, and distress the adversary.

IV. The adversary's king should never be attacked without a force sufficient, and if the

player's

VI. No man should be played till the board is thoroughly examined, that the player might defend himfelf against any move the adversary has in view, neither should any attack be made till the confequences of the adverfary's next move are confidered; and when an attack may with fafety be made, it should be purfued without catching at any bait that might be thrown out in order for the adversary to gain a move, and thereby cause the design to miscarry.

VII. The queen should never stand in such a manner before the king, that the adversary, by bringing a rook or bishop, could check the king if the were not there; as it might be the lofs of

the queen.

VIII. The adverfary's knight should never er be be suffered to check the king and queen, or king and rook, or queen and rook, or the two rooks at the same time; especially if the knight is properly guarded; because in the two first cases, the king being forced to go out of check, the queen or the rook must be lost; and in the two last \$03,00 cales,

cases, a rook must be lost at least, for a worse piece.

IX. The player should take care that no guarded pawn of the adversary's, fork two of his

pieces.

X. As foon as the kings have castled on different sides of the board, the pawns on that side of the board should be advanced upon the adversary king, and the pieces, especially the queen and rook, should be brought to support them; and the three pawns belonging to the

e

at t

king that is callled must not be moved.

XI. The more moves a player can have as it were in ambuscade, the better; that is to say, the queen, bishop or rook, is to be placed behind a pawn or a piece, in such a position, as that upon playing that pawn or piece, a check is discovered upon the adversary's king, by which means a piece or some advantage is often gained.

XII. An inferior piece should never be guarded with a superior, when a pawn would answer the same purpose; for this reason, the superior piece may remain out of play--Neither should a pawn be guarded with a piece, when

a pawn would do as well.

XIII. A well supported pawn that is passed, often costs the adversary a piece, and when a pawn or any other advantage is gained without endangering the loss of the move, the player should make as frequent exchanges of pieces as he can. The advantage of a passed pawn is this; for example, if the player and his adversary have each three pawns upon the board, and no pieces.

piece, and the player has one of his pawns on one fide of the board, and the other two on the other fide, and the adverfary's three pawns are opposite to the player's two pawns, he should march with his king as soon as he can, and take the adverfary's pawns: If the adversary goes with his king to support them, the player should go on to queen with his single pawns, and then if the adversary goes to hinder him, he should take the adversary's pawns, and move the others to queen*.

XIV. When the game is near finished, each party having only three or four pawns on each side of the board, the kings must endeavour to gain the move in order to win the game. For instance, when the player brings his king opposite to the adversary's with only one square

between, he will gain the move.

XV. If the adversary has his king and one pawn on the board, and the player has only his king, he cannot lose the game, provided he brings his king opposite to the adversary's, when the adversary is directly before or on one side of his pawn and there is only one square between the kings.

XVI. If the adversary has a bishop and one pawn on the rook's line, and this bishop is not of the colour that commands the corner square the pawn is going to, and the player has only his king, if he can get into that corner, he can-

not

^{*} To queen, is to make a queen, that is, to move a pawn into the adverfary's back row, which is the rule at this game when the original one is loft.

not lofe, but, on the contrary, may win by a stale*.

XVII. If the player has greatly the difadvantage of the game, having only his queen left in play, and his king happens to be in a position to win as above-mentioned, he should keep giving check to the adversary's king, always taking care not to check him where he can interpose any of his pieces that make the stale; by so doing he will at last force the adversary to take his queen, and then he will win the game by being in a stale-mate.

AVIII. The player should never cover a check with a piece that a pawn pushed upon it may take, for sear of getting only the pawn in

exchange for the piece.

XIX. A player should never crowd his adversary up with pieces, for fear of giving a stale-mate inadvertently, but always should leave

room for his king to move.

By way of corroborating what has been already faid with respect to this game, it is necesfary to warn a player against playing a timid game. He should never be too much asraid of sosing a rook for an inferior piece, because, altho arook is a better piece than any other except the queen, it feldom comes into play, to be of any great use till at the end of the game; for which reason it is often better to have an inferior piece in play, than a superior one to stand still, or moving to no great purpose. If a piece 15

185

is moved, and is immediately drove away by a pawn, it may be reckoned a bad move, because the adversary gains a double advantage over the player, in advancing at the same time the other is made to retire; although the first move may not seem of consequence between equal players, yet a move or two more lost after the first, makes the game scarcely to be recovered.

There never wants for variety at this game, provided the pieces have been brought out regular, but if otherwise, it often happens that a

player has fcarce any thing to play.

Many indifferent players think nothing of the pawns, whereas three pawns together are strong, but four, which constitute a square, with the assistance of other pieces, well managed, make an invincible strength, and in all probability may produce a queen when very much wanted. It is true that two pawns with a space between, are no better than one, and if there should be three over each other in a line, the game cannot be in a worse way. This shews that the pawns are of great consequence, provided they are kept close together.

Some middling players are very apt to risk losing the game in order to recover a piece: this is a mistake; for it is much better to give up a piece and attack the enemy in another quarter; by so doing the player has a chance of snatching a pawn or two from, or gaining some advantage over the adversary, whilst his attention

is taken up in purfuing this piece.

If the queen and another piece are attacked at

the fame time, and that by removing the queen the piece must be lost; provided two pieces can be gained in exchange for the queen, the queen should be given up, it being the difference of three pieces, and confequently more than the value of the queen. By lofing the queen, the game is not thrown into that diforder which it would otherwise have been; in this case it would be judicious to give the queen for even a piece, or a pawn or two; being well known among good players, that he who begins the attack, and can't maintain it, being obliged to retire, generally lofes the game.

A player should never be fond of changing without reason, because the adversary, if he is a good player, will ruin his fituation, and gain a confiderable advantage over him. But rather than lofe a move, when a player is stronger than the adversary, it is good play to change,

for he thereby encreases his ftrength.

When the game is almost drawn to a conclufion, the player should recollect that his king is a capital piece, and confequently should keep him in motion; by fo doing he generally gets the move, and often the game.

As the queen, rook, and bishop operate at a distance, it is not always necessary in the attack to have them near the adverfary's king.

If a man can be taken with different pieces, the player should take his time, and consider which of those pieces is the best to take it with.

If a piece can be taken almost at any time, the player should not be in a hurry about it, but

After all that has been faid, it is still necessary for us to advise those who would play well at this game, to be very cool and attentive to the matter in question: for it is impossible that any person in the universe can be capable of playing at chess, if their thoughts are employed elsewhere.

LAWS at CHESS.

I. If a player touches his man, he must play

it, and if he quits it, he cannot recall it.

II. If by mistake or otherwise, a false move is played, and the adversary takes no notice of it till he hath played his next move, it cannot be recalled by either of the parties.

III. If a player misplaces the men, and he plays two moves, it is at the option of the adversary to permit him to begin the game or not.

IV. If the adversary plays or discovers a check to a player's king, and gives no notice of it, the player may let him stand still till he does.

V. After the king is moved, a player can-

not caftle.

BILLIARDS.

With the RULES and ODDS made use of in BETTING at this GAME. Likewise an Account of the different kinds of GAMES played on a BILLIARD TABLE.

CHAP. I.

Some account of the origin of billiards, with a description of the table on which it is played.

THE game of billiards was invented by the French, when it was played in a different manner from what it is at present, by having a pass or iron fixed on the table, through which the balls at particular periods of the game used to be played; but now this method is quite laid aside both in France and in every place where the game is played.

Soon

GAME of BILLIARDS.

Soon after the French, the Germans, the Dutch, and Italians brought this game into vogue throughout most parts of Europe, at which they became great proficients, and in a few years afterwards it became a favourite diversion in many parts of England, particularly with persons of the first rank; indeed, since that time it has been in a great measure prostituted by the designing and vulgar fort of people: notwithstanding, this game will never be out of sashion, being of itself very entertaining, and attended with that kind of moderate exercise which renders it the more agreeable.

5.

in

an ES

the

ent ig a nich ifed laid nere

oon

The table on which this game is played, is generally about twelve feet long, and fix feet wide, or rather in the exact form of an oblong; it is covered with fine green cloth, and furrounded with cushions to prevent the ball rolling off, and to make them rebound. There are fix holes, nets, or pockets; these are fixed at the four corners, and in the middle, opposite each other, to receive the balls, which when put into these holes or pockets are called hazards. The making of a hazard, that is, putting the adversary's ball in, at the usual game

reckons for two in favour of the player.

CHAP.

CHAP. II.

Rules generally observed at the common or usual game, and the instruments described which are made use of in playing.

I. FOR the lead, the balls must be put at one end, and the player must strike them against the farthermost cushion, in order to see which will be nearest the cushion that is next to them.

II. The nearest to the cushion is to lead and

choose the ball, if he pleases.

III. The leader is to place his ball at the nail, and not to pass the middle pocket, and if he holes himself in leading, he loses the lead.

IV. He who follows the leader must stand within the corner of the table, and not place his

ball beyond the nail.

V. † He who plays upon the running ball lofes one.

VI. + He who touches the ball twice, and moves it, loses one.

VII. He who does not hit his adverfary's

ball, loses one.

VIII. He who touches both balls at the fame time, makes a foul stroke, in which case if he should hole his adversary, nothing is gained by

tab

the

it i

bef

⁺ These two rules are seldom or ever enforced, especially in England.

GAME of BILLIARDS. 191 the stroke; but if he should put himself in, he loses two.

IX. He who holes both balls lofes two.

X. He who strikes upon his adversary's ball, and holes himself, loses two.

XI. He who plays at the ball without firik-

ing it, and holes himself, loses three.

XII. He who strikes both balls over the table, loses two.

XIII. He who strikes his ball over the table, and does not hit his adversary's ball, loses three.

XIV. He who retains the end of his adverfary's stick when playing, or endeavours to balk his stroke, loses one.

XV. He who plays another's ball or stroke

without leave, loses one.

e-

ne

XVI. He who takes up his ball, or his ad-

verfary's without leave, loses one.

XVII. He who stops either ball when running loses one, and being near the hole, loses two.

XVIII. He who blows upon the ball when running loses one, and if near the hole, loses two.

XIX. He who shakes the table when the ball is running, loses one.

XX. He who strikes the table with the stick, or plays before his turn, loses one.

XXI. He who throws the flick upon the

table, and hits the ball, lofes one.

XXII. If the ball stands upon the edge of the hole, and after being challenged it falls in, it is nothing, but must be put up where it was before.

XXIII.

XXIII. If any person not being one of the players, stops a ball, the ball must stand in the place where it was stopp'd.

XXIV. He who plays without a foot upon the floor and holes his adversary's ball, gets no-

thing for it, but lofes the lead.

XXV. He who leaves the game before it is ended, loses it.

XXVI. Any person may change his stick in

play.

ers, he who marks the game, or the majority of the company, must decide it.

XXVIII. Those who do not play must stand from the table, and make room for the players.

XXIX. If any person lays any wager, and does not play, he shall not give advice to the

players upon the game.

The game of billiards is played with flicks, called maces, or with cues; the first confist of a long straight stick, with a head at the end, and are the most powerful instruments of the two: the cue is a thick flick diminishing gradually to a point of about half an inch diameter; this instrument is played over the left hand, and supported by the forefinger and thumb. It is the only instrument in vogue abroad, and is played with amazing address by the Italians, and some of the Dutch; but in England the mace is the prevailing instrument, which the foreigners hold in contempt, as it requires not near fo much address to play the game with, as when the cue is made use of; but the mace is preferred for its peculiar advantage, which fome professed players have artfully introduced, under the name of trailing, that is, following the ball with the mace to fuch a convenient distance from the other ball as to make it an easy hazard. The degrees of trailing are various, and undergo different denominations amongst the connoisseurs at this game; namely, the shove, the sweep, the long stroke, the trail, and the dead trail, or turn up, all which secure an advantage to a good player according to their various gradations: even the butt end of the cue becomes very powerful.

when it made use of by a good trailer.

CHAP. III.

Giving an account of the different kinds of games played at billiards.

BESIDES the common winning game, which is twelve up, there are feveral kinds of games played at billiards, viz. the losing game; the winning and losing; choice of balls; bricole; carambole; Russian carambole; the barhole; the one hole; the four game; and hazards.

ta

fr

ai

tl

ra

fo

Ci

g

th

th

is

an

The losing game, is the common game nearly reversed; that is to say, except hitting the balls, which is absolutely necessary, the player gains by losing. By putting himself in, he wins two; by putting his advertary in, he loses two; but if he pockets both balls, he gets four.

This game depends greatly upon particular frengths, and is therefore very necessary to be

known to play the winning game well,

The winning and losing game, is a combination of both games; that is to fay, all balls that are not put in by striking first the adversary's ball, reckon towards game; and holing both balls reckons four.

As this game, and the losing, knocking over, or forcing the balls over the cushion, goes for nothing; the striker only loses the lead.

Choice of balls, is chufing each time which ball the player pleases, which is doubtless a great advantage,

GAME of BILLIARDS. advantage, and is generally played against losing

and winning.

Bricole, is being obliged to hit a cushion, and make the ball rebound or return to hit the adversary's ball, otherwise the player loses a point. This is a great difadvantage, and is reckoned between even players to be equal to re-

ceiving about eight or nine points.

Carambole, is a game newly introduced from France. It is played with three balls, one being red, which is neutral, and is placed upon a spot on a line with the ftringing nail.* Each antagonist at the first stroke of a hazard, play from a mark which is upon a line with it at the other end of the table. The chief object at this game is, for the player to hit with his own ball the two other balls, which is called a carambole, and by which the player wins two. If he puts in the red ball, he gets three, and when he holes his adverfary's ball, he gets two; fo that feven may be made at one stroke, by caramboling and putting in both balls. This game refembles the lofing, depending chiefly upon particular strengths, and is generally played with the cue. The game is fixteen up; neverthelefs, it is reckoned to be fooner over than the common game.

The next object of this game, after making what we have diffinguished by the carambole, is the baulk; that is, making the white ball,

ei

and bringing the player's own ball and the redone below the stringing nail, from whence the adversaries begin. By this means the opponent is obliged to play bricole from the opposite cushion, and it often happens that the game is

determined by this fituation.

The Ruffian carambole, is a game that has flill more lately been introduced from abroad, and is played in the following manner. The red ball is placed as usual on the spot made for that purpose, but the player when he begins, or after having been holed, never places his ball on any particular place or fpot; he being at liberty to put it where he pleases. When he begins to play, inflead of ftriking at the red ball, he leads his own gently behind it, and his antagonist is to play at which he thinks proper; if he plays at the red ball, and holes it, he scores three as usual towards the game, which is twenty-four instead of fixteen points; and the red ball is put upon the fpot again, at which he may strike again, or take his choice which of the two balls to push at, always following his stroke till both balls are off the table. He is entitled to two points each time that he caramboles, the fame as at the other game, but if he caramboles and puts his own ball into any hole, he lofes as many as he might have got, had he not holed himfelf; for example, if he strikes at the red ball, which he holes, at the fame time caramboles and holes himfelf, he loses five points; and if he holes both balls when he caramboles, and likewise his own, he lofes feven, which he would have got,

GAME of BILLIARDS. 197 if he had not holed his own ball. In other respects it is played like the common carambole

game.

The bar hole, is so called, from the hole being barred which the ball should be played for, and the player striking for another hole; when this game is played against the common game, the advantage for the latter between equal play-

ers, is reckoned to be about fix.

The player at the one hole, though it feems to those who are not judges of the game, to be a great disadvantage, has in sact, the best of it; for as all balls that go into the one hole reckon, the player endeavours to lay his ball constantly before that hole, and his antagonist frequently finds it very difficult to keep one or other ball out, particularly on the leads, when the one hole player lays his ball (which he does as often as he can) on the brink of the hole; leading for that purpose from the opposite end, which in reality he has no right to do, for the lead should be given from the end of the table at which the hazard is made; but when a person happens to be a novice, this advantage is often taken.

The four game, confifts of two partners on each fide, at the common winning game; who play by fuccession after each hazard, or two points lost. The game is fifteen up; so that the point or hazard is an odd number, which makes a miss at this game of more consequence than it is at another; being as much at four, fix, or eight, as it is at five, seven, or nine at the fingle

game.

Hazards,

Hazards, are fo called, because they depend entirely upon the making of hazards, there being no account kept of any game. Any number of persons may play, by having balls that are numbered: but the number feldom exceeds fix, to avoid confusion. The person whose ball is put in, pays fo much to the player according to what is agreed to be played for each hazard; and the person who misses, pays half the price of a hazard to him whose ball he played at. The only general rule is not to lay any ball a hazard for the next player, which may be in a great measure avoided, by always playing upon the next player, and either bringing him close to the cushion, or putting him at a distance from the rest of of the balls. The table, when hazards are played is always paid for by the hour:

General observations worthy attention.

If a person lays money on a hazard, when either of the players is eleven, and one of them misses and runs into the hole, he who laid his money upon this player, does not lose the hazard, the game being out by the miss, and of course the hazard is void.

refary has a right to lead, if he does not like the ball he has to play at; or, if a person proposes parting the balls, his adversary has a right

to the lead.

If a person loses a hazard in one of the corner holes, he can oblige his adversary to lead from the end where he lost the said hazard.

If a person should lose a hazard in either of the middle holes, his adversary can oblige him

to go to which end he pleafes,

If a person should play with the wrong ball, his advertary has a right to the lead, if he don't like either of the balls he has to play at; provided he can make it appear that he played with his own ball the stroke before: but if he thinks proper to play the stroke, he may take his choice of the balls, and the hazard must be played out.

The END of the GAME of BILLIARDS.

ACCOUNT

Of the GAME at

TENNIS;

Whereby a person who has never seen a Tennis court, may learn in what manner this game is played, the usual odds, and the method of betting at the same.

A smany persons would become players at tennis, provided they could easily understand the rudiments of the game, so as to form some judgment of the players, or at least to know who wins and who loses, we have here attempted to give so plain a description of it, that no one can be at a loss, if ever he should bett or play. As to the executive part, it requires great practice to make a good player, so that nothing can be done without it; all we presume to do is to give an insight into the game, whereby a person may not seem a total stranger to it, when he happens to be in a tennis court.

The game of tennis is played in most capital cities in Europe, particularly in France, from whence we may venture to derive its origin. It is esteemed with many to be one of the most ancient games in Christendom, and long before

S 2

king

king Charles the First's time it was played in

England.

This game is as intricate as any game whatever; a person who is totally ignorant of it, may look on for a month together, without being able to make out how the game is decided. Therefore, we shall begin by describing the

court in which it is played.

The fize of a tennis court is generally about ninety-fix, or feven feet, by thirty-three, or four, there being no exact dimension ascribed to its proportion, a foot more or less in length or width being of no confequence. A line or net hangs exactly across the middle, over which the ball must be struck, either with a racket or board to make the stroke good. Upon the entrance of a tennis-court, there is a long gallery which goes to the dedans, that is a kind of front gallery, where spectators usually stand, into which whenever a ball is struck, it tells for a certain This long gallery is divided into different compartiments or galleries, each of which has its particular name, as follows; from the line towards the dedans, are the first gallery, door, second gallery, and the last gallery; which is called the service side. From the dedans to the last gallery are the figures 1, 2, 3, 4, 5, 6, at a yard diffince each, by which the chaces are marked, and is one of the most essential parts of the game, as will appear in the following defcription.

On the other fide the line are also the first gallery, door, second gallery, and last gallery; which is called the Hazard-side. Every ball

ftruck

10

fruck into the last gallery on this side reckons for a certain stroke the same as the dedans. Between the fecond, and this last gallery are the figures 1, 2, to mark the chaces on the hazard-fide. Over this long gallery, or these compartiments, is a covering, called the pent-house on which they play the ball from the fervice-fide, in order to begin a fet of tennis, from which it is called a fervice. When they mis putting ball (so as to rebound from the pent-house) over a certain line on the fervice-fide, it is deemed a tault, two of which are reckoned for a stroke. If the ball rolls round the pent house, on the opposite side the court, so as to fall beyond a certain line described for that purpose, it is called passe, reckons for nothing on either side, and the play must ferve again.

On the right-hand side of the court from the dedans is what they call the tambour, a part of the wall which projects, and is so contrived in order to make a variety in the stroke, and render it more difficult to be returned by the adversary; for when a ball strikes the tambour, it varies its direction, and requires some extraordinary judgment to return it over the line. The last thing on the right hand side is called the grill, wherein if the ball is struck, it is also sit-

teen, or a certain stroke.

The game of tennis is played by what they call fets; a fet of tennis confifts of fix games: but if they play what is called an advantage fet, two above five games must be won on one side or the other successively, in order to decide; or, if it comes to six games all, two games must still be

S 3

won

won on one fide to conclude the fet; so that an advantage set may last a confiderable time, for which kind of sets the court is paid more than

for any other.

We must now describe the use of the chaces, and by what means these chaces decide or interfere so much in the game. When the player gives his fervice at the beginning of a fet, his adverfary is supposed to return the ball, and wherever it falls after the first rebound untouched, the chace is called accordingly; for example, if the ball falls at the figure 1, the chace is called at a yard, that is to fay, at a yard from the dedans; this chace remains till a fecond fervice is given, and if the player on the fervice-fide lets the ball go after his adverfary returns it, and if the ball falls on or between any of these figures or chases, they must change fides, there being two chaces; and he who then will be on the hazard fide, must play to win the first chace, which if he wins by striking the ball fo as to fall, after its first rebound, nearer to the dedans than the figure 1, without his adversary's being able to return it from its first hop. he wins a stroke, and then proceeds in like manner to win the fecond chace, wherever it should happen to be. If a ball falls on the line with the first gallery-door, second gallery, or last gallery, the chace is likewise called at such or such a place, naming the gallery, door, &c. When it is just put over the line, it is called a chace at the line. If the player on the service-fide returns a ball with fuch force as to firike the wall on the hazard-fide fo as to rebound, after the first first hop over the line, it is also called a chace at the line.

The chaces on the hazard-side, proceed from the ball being returned either too hard or not quite hard enough; so that the ball after its first rebound, salls on this side the blue line, or line which describes the hazard-side chaces, in which case, it is a chase at 1, 2, &c. provided there is no chace depending. When they change sides, the player, in order to win this chace, must put the ball over the line any where, so that his adversary does not return it. When there is no chace on the hazard-side, all balls put over the line from the service side, without being returned, reckon for a stroke.

As the game depends chiefly upon the marking, it will be necessary to explain it, and to recommend those who play at tennis to have a good and unbiassed marker, for on him the whole set may depend: he can mark in favour of the one and against the other in such a manner, as will render it two to one at starting, though even players. Instead of which the marker should be very attentive to the chaces, and not be any way partial to either of the

players.

This game is marked in a very fingular manner, which makes it first somewhat difficult to understand. The first stroke is called fifteen, the second thirty, the third forty, and the fourth, game, unless the players get four strokes each; in that case, instead of calling it forty all, it is called deuce; after which, as soon as any stroke is got, it is called advantage, and in case the strokes

strokes become equal again, deuce again, till one or the other gets two strokes following, which win the game; and as the games are won, so they are marked and called, as one game love, two games to one, &c. towards the set, of which so many of these games it consists.

Although but one ball at a time is played with, a number of balls are made use of at this game, to avoid trouble, and are handed to the players in baskets for that purpose: by which means they can play as long as they please, without

ever having occasion to stoop for a ball.

As to the odds at tennis, they are by no means fixed, but are generally laid as follow.

Upon the first stroke being won between even players, that is, fifteen love, the odds are of the fingle game 7 to 4

Thirty love - 4 1
Forty love - 8 1

Thirty fifteen - 2 to 1
Forty fifteen - 5 1

Forty thirty - 3 1

The odds of a four game fet when the first game is won, are - 7 to 4

When two games love 4 1
Three games love 8 1

When two games to one 2 to 1
Three games to one 5 1

214 GAME of T	ENI	VIS.	1	
When four games to three	6.18 ×	8	to	5
Five games to three	1	* 3	,arca	1
When five games to four	svoi svoi	2	to	1
When fix games to five	570	5	to	2

The foregoing odds, as beforefaid, are generally laid, but the chaces interfering makes the odds very precarious; for example, when there is a chace at half a yard, and a fet is fives games all, and in every other respect equal, the odds are a good five to four; and if it were fix games to five, and forty thirty with the same chace, the odds then would be a guinea to a shilling; so that it is plain that the odds at this game differ from those of any other: for one stroke will reduce a fet, supposing the players to be five games all, from an even wager to three to two, and so on in proportion to the stage of the fet.

There are various methods of giving odds at tennis, in order to make a match equal; and that they may be understood, we shall give the following list of them, with their meanings, so that any person may form a judgment of the ad-

vantage received or given.

The lowest odds that can be given, excepting the choice of the sides, is what they call a bisque, that is a stroke to be taken or scored whenever the player, who receives the advantage, thinks proper; for instance, suppose a critical game of the set to be forty thirty, by taking the bisque.

he who is forty becomes game, and so in respect of two bifques, &c.

The next greater odds are fifteen, that is, a certain stroke given at the beginning of each

game.

S

of

e. e

After these, half thirty, that is fifteen one game, and thirty the next. Then follow the whole thirty, forty, &c.

There are also the following kind of odds

which are given, &c.

Round fervices, those are services given round the pent-house, so as to render it easy for the

* striker-out to return the ball.

Half-court, that is being obliged or confined to play into the adverfary's half-court; fometimes it is played ftrait-ways, and at other times across; both which are great advantages given by him to confined, but the strait half-court is the greatest.

Touch-no-wall, that is, being obliged to play within the compass of the walls, or sides of the court; this is a confiderable advantage to him who receives it; as all the balls must be played gently, and confequently they are much eafier to take than those which are played hard, or ac-

cording to the usual method of play.

Barring the hazards, that is barring the dedans, tambour, grill. or the last gallery on the hazard-fide, ar any particular one or more of them.

These are the common kind of odds or advantages given; but there are many others,

The player who is on the hazard-fide.

216 GAME of TENNIS.

are according to what is agreed by the players, fuch as playing with board against racket, cricket-

bat against racket, &c.

The game of tennis is also played by four persons, two partners on each side. In this case, they are generally confined to their particular quarters, one of each side appointed to serve and strike out; in every other respect, the game is played in the same manner, as when two only play.

Any thing more to be faid upon this subject would be needless, as nothing can be recommended, after reading this short account of tennis, but practice and attention, without which no one can become a proficient at the game.
